MISSION

To help our Stakeholders have peace of mind

VISION

To be one of the top Insurance Companies of choice in Africa

PRINCIPLES

Integrity

We will act with openness, fairness, integrity and diligence. We will always adhere to the applicable laws, regulations and standards of doing business.

Performance

We will promote a positive and challenging high performance culture. We will do this by encouraging personal accountability, development and measuring, reward and recognizing success.

Responsibility

We will act responsibly as individuals and as a Company. This applies to the management of our business, our approach to corporate interaction with key external stakeholders.

Values

- Working in teams
- Servicing our Customers
- Respecting each other
- Being proactive
- Growing our people
- Delivering to our Shareholders
- Guarding against arrogance
- Upholding the highest levels of integrity

OUR COMMITMENTS

Customers

A satisfied and loyal customer base is core to our business.

We are committed to:

- Delivering the consistent and reliable levels of customer service.
- Acting with integrity, due care and diligence.
- Communicating openly, honestly and with sensitivity and understanding.
- Listening to our customers.
- Handling complaints fairly and promptly.
- Respecting our customers' rights to privacy and confidentiality.
- Protecting our customers and our business from fraud.

Business Partners

We demand high standards from the companies we work with and believe that they should expect the same from us.

We are committed to:

- Carrying out our business with fairness and integrity.
- Being reliable and quick to respond.
- Awarding contracts and selecting business partners solely on the basis of fair and objective business criteria and having regards to high ethical standards.
- Respecting all obligations and confidentiality.
- Protecting our customers and our business from fraud.

Employees

Motivated and skilled employees are critical to our success.

We are committed to:

- Fostering a positive and challenging high performance culture.
- Rewarding superior performance.
- Encouraging personal development.
- Encouraging a culture of frank and honest communication.
- Encouraging teamwork and strong leadership.
- Providing a safe and secure working environment.
- Encouraging diversity and equal opportunities.
- Ensuring that grievances and unethical behaviour can be raised without fear of discrimination.

In return we expect our employees to:

- Act with integrity.
- Take responsibility and accountability for their own actions.
- Show support and commitment for change.
- Focus their energy in getting the best from themselves and others.
- Have the confidence and courage to act with conviction.
- Show understanding for and meet external and internal customers needs.
- Show a relentless desire for success.
- Create positive and effective working relationships.

Regulators

We have an open, cooperative and transparent relationship with our regulators.

We are committed to:

- Dealing with our regulators in an open, cooperative and transparent manner.
- Managing our business with appropriate standards of risk management and controls.
- Preventing and reporting any instances of significant financial crime.
- Preventing breaches of relevant regulatory requirements.
- Complying with all set standards.

Community & Environment

We believe in continuous improvement of our environmental performance and in taking action around emerging environmental issues. Whenever we operate, we will seek positive engagement with local communities.

We are committed to:

- As a business, we have a responsibility to manage our impacts on the environment through appropriate use of resources such as energy, paper and water and the investment of our assets.
- We also have a responsibility to take proactive action on environmental issues that are likely to affect our business and community at large.
- In each of these areas, we will look to make continuous improvement and actively monitor our performance.

Shareholders

We are committed to fulfilling the aspirations of our shareholders through a commitment to business performance, and high standards of transparency, communication and corporate governance.

We are committed to:

- A culture of business performance, focused on delivering returns to shareholders.
- Comprehensive and transparent disclosure.
- Aiding Shareholder's understanding through the disclosure of relevant financial and non-financial information.
- Listening to the views of our shareholders.
- Managing our business with appropriate standards of risk and control.
- Ensuring due care in the selection of our third party advisers, including our auditors.
- Preventing and reporting any market abuse.
- Acting with due sense of responsibility on confidence entrusted to us.

STATEMENT OF SIGNIFICANT ACCOUNTING POLICIES

1.1 Reporting Entity

Veritas Kapital Assurance Plc ("the group") was initially incorporated under the name of Kapital Insurance group Limited as a private limited liability group on the 8 August, 1973. on 14 March 2007, it acquired and merged with two other insurance companies became a public limited liability group. its shares are quoted on the Nigerian Stock Exchange.

Its Head Office is located at 497 Abogo Largema Street, Off constitution Avenue, Central Business District, Abuja Nigeria.

The group has 93.5% equity interest in Veritas Health Care Limited and 70% interest in Veritas Glanvills Pensions Limited and 51.53% in Goldlink Insurance Plc. The group comprises of two subsidiaries, an associate and the parent group.

1.2 Principal Activities

The principal business of the group is underwriting of non-life insurance risks.

The subsidiaries activities are:

Veritas Glanvills Pensions Limited, the administration and management of pension fund assets.

Veritas Health Care Limited provision of health insurance.

1.3 Components of Financial Statements

The Consolidated Financial statements comprise the Statements of Comprehensive income, statements of Financial Position, Statement of Changes in Equity, Statements of Cash Flows, and the acgrouping Notes.

Income and expenses (excluding the components of other comprehensive income) are recognised in the profit or loss segment of comprehensive income to arrive at the profit for the year.

Other comprehensive income is recognised in the other comprehensive segment of the statement of other comprehensive income and comprises items of income and expenses that are not recognised in the statment of profit or loss as required or permitted by IFRS.

The addition of the profit for the year and the other comprehensive income gives the total comprehensive income for the year.

Reclassification adjustments are amounts reclassified to statement of comprehensive income in the current period that were recognised in other comprehensive income in the current or previous periods. Transactions with the owners of the group in their capacity as owners are recognised in the statement of changes in equity.

1.4 Basis of preparation and measurement

The Consolidated and separate financial statements are prepared in compliance with International Financial Reporting Standards (IFRS) and the requirements of the Companies and Allied Matters Act, Insurance Act, 2003 and regulatory guidelines as pronounced from time to time by National Insurance Commission (NAICOM). Historical cost basis was used in preparation of the financial statements as modified by the certain items of:

- Property plant and equipment at valuation
- investment property at fair value
- investment at fair value
- impaired assets at their recoverable amounts

1.5 Compliance with IFRS

These Consolidated financial statements have been prepared in accordance with the International Financial Reporting Standards (IFRS) and IFRS Interpretations Committee (IFRIC) Interpretations applicable to companies reporting under IFRS as issued by the International Accounting Standards Board (IASB). Additional information required by national regulations have been included where appropriate

1.6 Going Concern status

The consolidated financial statements have been prepared on the going concern basis. The group has no intention or need to reduce substantially its business operations. The management believes that the going concern assumption is appropriate for the group and group due to sufficient liquidity and based on historical experience that shorterterm obligations will be refinanced in the normal course of business. Liquidity ratio and continuous evaluation of current ratio of the group is carried out to ensure that there are no going concern threats to the operation of the group.

1.7 Significant judgements and key sources of estimation uncertainty

In the process of applying the accounting policies adopted by the group, the Directors make certain judgements and estimates that may affect the carrying values of assets and liabilities in the next financial period. Such judgements and estimates are based on historical experience and other factors, including expectations of future events that are believed to be reasonable under the current circumstances. The directors evaluate these at each financial reporting date to ensure that they are still reasonable under the prevailing circumstances based on the information available.

The preparation of the group's financial statements requires management to make judgements, estimates and assumptions that affect the reported amounts of revenues, expenses, assets and liabilities and the disclosure of contingent liabilities, at the reporting date. However, uncertainty about these assumptions and estimates could result in outcomes that could require a material adjustment to the carrying amount of the asset or liability affected in the future. These factors should include:

The judgements made by the directors in the process of applying the group's accounting policies that have the most significant effect on the amounts recognised in the financial statements include:

- **Claims arising from insurance contracts**

Liabilities for unpaid claims are estimated on a case by case basis. The liabilities recognised for claims fluctuate based on the nature and severity of the claim reported. Claims incurred but not reported are determined using statistical analyses and the group deems liabilities reported as adequate.

- **Deferred acquisition costs (DAC)**

Commissions that vary with and are related to securing new contracts and renewing existing contracts are capitalised as an intangible asset under Deferred Acquisition Costs (DAC). The amount of commission to be deferred is directly proportional to the time apportionment basis of the underlying premium income to which the acquisition cost is directly related.

- **Fair value of unquoted equity financial instruments**

The fair value of financial instruments where no active market exists or where quoted prices are not otherwise available are determined by using valuation techniques. In these cases, the fair values are estimated from observable data using valuation models.

- **Property, Plant and equipment**

Property, Plant and equipment represent one of the most significant proportion of the asset base of the group, accounting for about 26% of the group's total assets. Therefore the estimates and assumptions made to determine their carrying value and related depreciation are critical to the group's financial position and performance.

The charge in respect of periodic depreciation is derived after determining an estimate of an asset's expected useful life and the expected residual value at the end of its life. Increasing an asset's expected life or its residual value would result in the reduced depreciation charge in the statement of comprehensive income.

The useful lives and residual values of the property, plant and equipment are determined by management based on historical experience as well as anticipation of future events and circumstances which may impact their useful lives.

- **Goodwill**

Goodwill is evaluated for impairment annually or whenever we identify certain triggering events or circumstances that would more likely than not reduce the fair value of a reporting unit below its carrying amount. Events or circumstances that might indicate an interim evaluation is warranted include, among other things, unexpected adverse business conditions, macro and reporting unit specific economic factors (for example, interest rate and foreign exchange rate fluctuations, and loss of key personnel), supply costs, unanticipated competitive activities, and acts by governments and courts.

Goodwill is tested for impairment annually and when circumstances indicate that the carrying value may be impaired. Impairment is determined for goodwill by assessing the recoverable amount of the cash generating unit to which the goodwill relates. Where the recoverable amount of the cash generating unit is less than their carrying amount, an impairment is recognized.

- **Deferred Tax Assets**

Deferred tax assets are recognised for all unused tax losses to the extent that it is probable that taxable profit will be available against which temporary differences can be utilised. Management judgment is required to determine the amount of deferred tax assets that can be recognized, based upon the likely timing and other factors

1.8 Functional and presentation currency

The consolidated financial statements are presented in Nigerian Naira (Naira), rounded to the nearest thousand, this is also the functional currency of the group.

1.9 Changes in accounting policy and disclosures

New and amended standards and interpretations

The group applied for the first time, certain standards and amendments, which are effective for annual periods beginning on or after 1 January 2022. Their adoption has not had any material impact on the disclosures or on the amounts reported in these financial statements.

The group has not early adopted any other standard, interpretation or amendment that has been issued but not yet effective.

Amendments to IFRS 3 Reference to the Conceptual Framework	The group has adopted the amendments to IFRS 3 Business Combinations for the first time in the current year. The amendments update IFRS 3 so that it refers to the 2018 Conceptual Framework instead of the 1989 Framework. They also add to IFRS 3 a requirement that, for obligations within the scope of IAS 37 Provisions, Contingent Liabilities and Contingent Assets, an acquirer applies IAS 37 to determine whether at the acquisition date a present obligation exists as a result of past events. For a levy that would be within the scope of IFRIC 21 Levies, the acquirer applies IFRIC 21 to determine whether the obligating event that gives rise to a liability to pay the levy has occurred by the acquisition date.
Amendments to IAS 16 Property, Plant and Equipment—Proceeds before Intended Use	The group has adopted the amendments to IAS 16 Property, Plant and Equipment for the first time in the current year. The amendments prohibit deducting from the cost of an item of property, plant and equipment any proceeds from selling items produced before that asset is available for use, i.e. proceeds while bringing the asset to the location and condition necessary for it to be capable of operating in the manner intended by management. Consequently, an entity recognises such sales proceeds and related costs in profit or loss. The entity measures the cost of those items in accordance with IAS 2 Inventories. The amendments also clarify the meaning of 'testing whether an asset is functioning properly'. IAS 16 now specifies this as assessing whether the technical and physical performance of the asset is such that it is capable of being used in the production or supply of goods or services, for rental to others, or for administrative purposes. If not presented separately in the statement of comprehensive income, the financial statements shall disclose the amounts of proceeds and cost included in profit or loss that relate to items produced that are not an output of the entity's ordinary activities, and which line item(s) in the statement of comprehensive income include(s) such proceeds and cost.
Amendments to IAS 37 Onerous Contracts—Cost of Fulfilling a Contract	The group has adopted the amendments to IAS 37 for the first time in the current year. The amendments specify that the cost of fulfilling a contract comprises the costs that relate directly to the contract. Costs that relate directly to a contract consist of both the incremental costs of fulfilling that contract (examples would be direct labour or materials) and an allocation of other costs that relate directly to fulfilling contracts (an example would be the allocation of the depreciation charge for an item of property, plant and equipment used in fulfilling the contract).

Annual Improvements to IFRS Accounting Standards 2018- 2020 Cycle	The group has adopted the amendments included in the Annual Improvements to IFRS Accounting Standards 2018-2020 Cycle for the first time in the current year. The Annual Improvements include amendments to four standards. IFRS 1 First-time Adoption of International Financial Reporting Standards The amendment provides additional relief to a subsidiary which becomes a first-time adopter later than its parent in respect of accounting for cumulative translation differences. As a result of the amendment, a subsidiary that uses the exemption in IFRS 1:D16(a) can now also elect to measure cumulative translation differences for all foreign operations at the carrying amount that would be included in the parent's consolidated financial statements, based on the parent's date of transition to IFRS Accounting Standards, if no adjustments were made for consolidation procedures and for the effects of the business combination in which the parent acquired the subsidiary. A similar election is available to an associate or joint venture that uses the exemption in IFRS 1:D16(a). IFRS 9 Financial Instruments The amendment clarifies that in applying the '10 per cent' test to assess whether to derecognise a financial liability, an entity includes only fees paid or received between the entity (the borrower) and the lender, including fees paid or received by either the entity or the lender on the other's behalf. IFRS 16 Leases The amendment removes the illustration of the reimbursement of leasehold improvements. IAS 41 Agriculture The amendment removes the requirement in IAS 41 for entities to exclude cash flows for taxation when measuring fair value. This aligns the fair value measurement in IAS 41 with the requirements of IFRS 13 Fair Value Measurement to use internally consistent cash flows and discount rates and enables preparers to determine whether to use pre-tax or post-tax cash flows and discount rates for the most appropriate fair value measurement.
--	--

1.10 Summary of significant accounting policies

1.10.1 Introduction to summary of accounting policies

The principal accounting policies applied in the preparation of these consolidated and separate financial statements are set out below. These policies have been consistently applied to all the years presented, unless otherwise stated.

(a) New and revised IFRS Accounting Standards in issue but not yet effective

The following new and amended standards have been issued but are yet to become effective as at December 31, 2022.

IFRS 17 (including the June 2020 and December 2021 amendments to IFRS 17)	IFRS 17 Insurance Contracts IFRS 17 establishes the principles for the recognition, measurement, presentation and disclosure of insurance contracts and supersedes IFRS 4 Insurance Contracts. IFRS 17 outlines a general model, which is modified for insurance contracts with direct participation features, described as the variable fee approach. The general model is simplified if certain criteria are met by measuring the liability for remaining coverage using the premium allocation approach. The general model uses current assumptions to estimate the amount, timing and uncertainty of future cash flows and it explicitly measures the cost of that uncertainty. It takes into account market interest rates and the impact of policyholders' options and guarantees. In June 2020, the IASB issued Amendments to IFRS 17 to address concerns and implementation challenges that were identified after IFRS 17 was published. The amendments defer the date of initial application of IFRS 17 (incorporating the amendments) to annual reporting periods beginning on or after 1 January 2023. At the same time, the IASB issued Extension of the Temporary Exemption from Applying IFRS 9 (Amendments to IFRS 4) that extends the fixed expiry date of the temporary exemption from applying IFRS 9 in IFRS 4 to annual reporting periods beginning on or after 1 January 2023. In December 2021, the IASB issued Initial Application of IFRS 17 and IFRS 9—Comparative Information (Amendment to IFRS 17) to address implementation challenges that were identified after IFRS 17 was published. The amendment addresses challenges in the presentation of comparative information. IFRS 17 must be applied retrospectively unless impracticable, in which case the modified retrospective approach or the fair value approach is applied. For the purpose of the transition requirements, the date of initial application is the start of the annual reporting period in which the entity first applies the Standard, and the transition date is the beginning of the period immediately preceding the date of initial application.
Amendments to IFRS 10 Consolidated Financial Statements and IAS 28 Investments in Associates and Joint Ventures—Sale or Contribution of Assets between an Investor and its Associate or Joint Venture	The amendments to IFRS 10 and IAS 28 deal with situations where there is a sale or contribution of assets between an investor and its associate or joint venture. Specifically, the amendments state that gains or losses resulting from the loss of control of a subsidiary that does not contain a business in a transaction with an associate or a joint venture that is accounted for using the equity method, are recognised in the parent's profit or loss only to the extent of the unrelated investors' interests in that associate or joint venture. Similarly, gains and losses resulting from the remeasurement of investments retained in any former subsidiary (that has become an associate or a joint venture that is accounted for using the equity method) to fair value are recognised in the former parent's profit or loss only to the extent of the unrelated investors' interests in the new associate or joint venture. The effective date of the amendments has yet to be set by the IASB; however, earlier application of the amendments is permitted. The directors of the group anticipate that the application of these amendments may have an impact on the Group's consolidated financial statements in future periods should such transactions arise.

Unaudited Financial Statement
For the year ended 31 December 2023

Amendments to IAS 1 Presentation of Financial Statements—Classification of Liabilities as Current or Noncurrent	The amendments to IAS 1 published in January 2020 affect only the presentation of liabilities as current or noncurrent in the statement of financial position and not the amount or timing of recognition of any asset, liability, income or expenses, or the information disclosed about those items. The amendments clarify that the classification of liabilities as current or non-current is based on rights that are in existence at the end of the reporting period, specify that classification is unaffected by expectations about whether an entity will exercise its right to defer settlement of a liability, explain that rights are in existence if covenants are complied with at the end of the reporting period, and introduce a definition of 'settlement' to make clear that settlement refers to the transfer to the counterparty of cash, equity instruments, other assets or services. The amendments are applied retrospectively for annual periods beginning on or after 1 January 2023, with early application permitted. The IASB is currently considering further amendments to the requirements in IAS
Amendments to IAS 1 Presentation of Financial Statements and IFRS Practice Statement 2 Making Materiality Judgements—Disclosure of Accounting Policies	The amendments change the requirements in IAS 1 with regard to disclosure of accounting policies. The amendments replace all instances of the term 'significant accounting policies' with 'material accounting policy information'. Accounting policy information is material if, when considered together with other information included in an entity's financial statements, it can reasonably be expected to influence decisions that the primary users of general purpose financial statements make on the basis of those financial statements. The supporting paragraphs in IAS 1 are also amended to clarify that accounting policy information that relates to immaterial transactions, other events or conditions is immaterial and need not be disclosed. Accounting policy information may be material because of the nature of the related transactions, other events or conditions, even if the amounts are immaterial. However, not all accounting policy information relating to material transactions, other events or conditions is itself material. The IASB has also developed guidance and examples to explain and demonstrate the application of the 'four-step materiality process' described in IFRS Practice Statement 2. The amendments to IAS 1 are effective for annual periods beginning on or after 1 January 2023, with earlier application permitted and are applied prospectively. The amendments to IFRS Practice Statement 2 do not contain an effective date or transition requirements.

Amendments to IAS 8 Accounting Policies, Changes in Accounting Estimates and Errors—Definition of Accounting Estimates	The amendments replace the definition of a change in accounting estimates with a definition of accounting estimates. Under the new definition, accounting estimates are “monetary amounts in financial statements that are subject to measurement uncertainty”. The definition of a change in accounting estimates was deleted. However, the IASB retained the concept of changes in accounting estimates in the Standard with the following clarifications: • A change in accounting estimate that results from new information or new developments is not the correction of an error • The effects of a change in an input or a measurement technique used to develop an accounting estimate are changes in accounting estimates if they do not result from the correction of prior period errors The IASB added two examples (Examples 4-5) to the Guidance on implementing IAS 8, which accompanies the Standard. The IASB has deleted one example (Example 3) as it could cause confusion in light of the amendments. The amendments are effective for annual periods beginning on or after 1 January 2023 to changes in accounting policies and changes in accounting estimates that occur on or after the beginning of that period, with earlier application permitted.
---	---

Amendments to IAS 12 Income Taxes—Deferred Tax related to Assets and Liabilities arising from a Single Transaction	The amendments introduce a further exception from the initial recognition exemption. Under the amendments, an entity does not apply the initial recognition exemption for transactions that give rise to equal taxable and deductible temporary differences. Depending on the applicable tax law, equal taxable and deductible temporary differences may arise on initial recognition of an asset and liability in a transaction that is not a business combination and affects neither accounting nor taxable profit. For example, this may arise upon recognition of a lease liability and the corresponding right-of-use asset applying IFRS 16 at the commencement date of a lease. Following the amendments to IAS 12, an entity is required to recognise the related deferred tax asset and liability, with the recognition of any deferred tax asset being subject to the recoverability criteria in IAS 12. The IASB also adds an illustrative example to IAS 12 that explains how the amendments are applied. The amendments apply to transactions that occur on or after the beginning of the earliest comparative period presented. In addition, at the beginning of the earliest comparative period an entity recognises: • A deferred tax asset (to the extent that it is probable that taxable profit will be available against which the deductible temporary difference can be utilised) and a deferred tax liability for all deductible and taxable temporary differences associated with: – Right-of-use assets and lease liabilities – Decommissioning, restoration and similar liabilities and the corresponding amounts recognised as part of the cost of the related asset. • The cumulative effect of initially applying the amendments as an adjustment to the opening balance of retained earnings (or other component of equity, as appropriate) at that date The amendments are effective for annual reporting periods beginning on or after 1 January 2023, with earlier application permitted. The directors of the group anticipate that the application of these amendments may have an impact on the Group's consolidated financial statements in future periods should such transactions arise.
---	---

1.11 Presentation of financial statements

The group presents its statements of financial position broadly in order of liquidity. An analysis regarding recovery or settlement within twelve months after the reporting date (current) and more than 12 months after the reporting date (non-current) is presented in the Notes.

2 Summary of Significant Accounting Policies

The principal accounting policies adopted in the preparation of these consolidated and separate financial statements are set out below. These policies have been consistently applied to all years presented unless otherwise stated.

2.1 Foreign currencies

On initial recognition, all transactions are recorded in the functional currency (the currency of the primary economic environment in

Monetary assets and liabilities at the statement of financial position date denominated in foreign currencies are translated into the functional currency using the exchange rate prevailing as at that date. The resulting foreign exchange gains and losses from the settlement of such transactions and from year-end translation are recognised on a net basis in the income statements in the year in which they arise, except for difference arising on translation of non-monetary available-for-sale financial assets, which are recognised in other comprehensive income.

2.2 Segment reporting

A segment is a distinguishable component of the group that is engaged either in providing related products or services (business segment), or in providing products or services within a particular economic environment (geographical segment), which is subject to risks and rewards that are different from those of other segments.

An operating segment is a component of an entity:

- That engages in business activities from which it may earn revenues and incur expenses (including revenues and expenses relating to transactions with other components of the same entity).
- Whose operating results are regularly reviewed by the entity's chief operating decision maker to make decision about resources to be allocated to the segment and assess its performance of the same entity)

-For which discrete financial information is available.

An operating segment may engage in business activities for which it has yet to earn revenues for example startup operations may be operating segments before earning revenues.

The company group operates insurance and pension lines of business and entirely within a geographical region.

2.3 Cash and cash equivalents

Cash and cash equivalents comprise cash on hand and demand deposits, together with other short-term, highly liquid investments that are readily convertible into known amounts of cash and which are subject to an insignificant risk of changes in value. Cash equivalents have a maturity period of less than or equal to three months.

2.4 Financial instruments

Initial recognition and measurement

Financial instruments are recognised initially when the group becomes a party to the contractual provisions of the instrument. All financial instruments are measured initially at their fair value plus transaction costs, except in the case of financial assets and financial liabilities recorded at fair value through profit or loss where transaction cost are expensed in the income statement.

The group classifies financial instruments or their components parts, on initial recognition as a financial asset, a financial liability or an equity instrument in accordance with the substance of the contractual agreement. Classification depends on the purpose for which the financial instruments were obtained or incurred and takes place at initial recognition.

Regular-way purchases and sales of financial assets are recognised on settlement date which is the date on which the group commits to purchase or sell the asset. Financial instruments are initially measured at fair value plus transaction costs for all financial assets not carried at fair value through profit and loss. These transaction costs are expensed in the income statement.

Measurement and recognition of expected credit losses

The measurement of expected credit losses is a function of the probability of default, loss given default (i.e. the magnitude of the loss if there is a default) and the exposure at default. The assessment of the probability of default and loss given default is based on historical data adjusted by forward-looking information as described above. As for the exposure at default, for financial assets, this shall be an estimate of the exposure at a future default date; for financial guarantee contracts, the exposure includes the amount drawn down as at the reporting date, together with any additional amounts expected to be drawn down in the future by default date determined based on historical trend, the group's understanding of the specific future financing needs of the debtors, and other relevant forward-looking information.

If the group has measured the loss allowance for a financial instrument at an amount equal to lifetime ECL in the previous reporting period, but determines at the current reporting date that the conditions for lifetime ECL are no longer met, the group measures the loss allowance at an amount equal to 12-month ECL at the current reporting date, except for assets for which simplified approach was used.

The group recognises an impairment gain or loss in profit or loss for all financial instruments with a corresponding adjustment to their carrying amount through a loss allowance account, except for investments in debt instruments that are measured at FVTOCI, for which the loss allowance is recognised in other comprehensive income and accumulated in the investment revaluation reserve, and does not reduce the carrying amount of the financial asset in the statement of financial position.

Derecognition of financial instruments

Previously recognised financial assets are derecognised when either the contractual rights to receive the cash flows from these assets have ceased to exist or the assets expire or the group transfers the assets such that the transfer qualifies for derecognition. The decision as to whether a transfer qualifies for derecognition is made by applying a combination of risks, rewards and control tests.

Collateral (shares and bonds) furnished by the group under standard repurchase agreements and securities lending and borrowing transactions is not derecognised because the group retains substantially all the risks and rewards on the basis of the predetermined repurchase price, and the criteria for derecognition are therefore not met.

Financial assets that are transferred to a third party but do not qualify for derecognition are presented in the statement of financial position as pledged assets, if the transferee has the right to sell or repledge them.

Derecognition of a financial liability occurs only when the obligation is extinguished. A financial liability is said to be extinguished when the obligation is discharged, cancelled or expired.

Offsetting financial instruments

Financial assets and liabilities are offset and the net amount reported in the statement of financial position when there is a legally enforceable right to offset the recognised amounts and there is an intention to settle on a net basis or realise the asset and settle the liability simultaneously.

Financial assets**a) Classification and subsequent measurement**

For the purpose of measuring a financial asset after initial recognition, IFRS 9 classifies financial assets into the following categories: at fair value through profit or loss; at fair value through other comprehensive income and at amortised cost. The classification is based on the results of the group's business model test and the contractual cashflow characteristics of the financial assets. The category relevant to the group as at 31 December 2019 are fair value through profit or loss; at fair value through other comprehensive income and at amortised cost. At initial recognition all assets are measured at Fair Value.

i) Financial assets at fair value through profit or loss

Financial assets at fair value through profit or loss are financial assets held for trading and those designated by the group as at fair value through profit or loss upon initial recognition. Financial assets classified as held through profit or loss are those that have been acquired principally for the purpose of selling in the short term or repurchasing in the near term, or held as part of a portfolio that is managed together for short-term profit.

Financial instruments included in this category are recognised initially at fair value; transaction costs are taken directly to profit or loss. Gains and losses arising from changes in fair value are included directly in profit or loss and are reported as 'Net gains/(losses) on financial assets classified as held for trading'. Interest income and expense and dividend income on financial assets held for trading are included in 'Discount and similar income' or 'Other operating income', respectively. Fair value changes relating to financial assets designated at fair value through profit or loss are recognised in 'Net gains from financial assets held for trading'.

ii) Amortised Cost

Except for financial assets that are designated at initial recognition as at fair value through profit or loss a financial asset is measured at amortised cost only if both of the following conditions are met:

- a. the financial asset is held within a business model whose objective is to hold financial assets in order to collect contractual cash flows (the business model test) and
- b. the contractual terms of the financial asset give rise on specified dates to cash flows that are solely payments of principal and interest on the principal amount outstanding (the contractual cash flows characteristics test).

If a financial asset satisfies both of these conditions, it is required to be measured at amortised cost unless it is designated as at fair value through profit or loss (FVTPL) on initial recognition

iii) Fair Value through other comprehensive income (FVTOCI)

Except for financial assets that are designated at initial recognition as at fair value through profit or loss, a financial asset is measured at fair value through other comprehensive income (FVTOCI) if both of the following conditions are met:

- a. the financial asset is held within a business model whose objective is achieved by both collecting contractual cash flows and selling financial assets (the business model test); and
- b. the contractual terms of the financial asset give rise on specified dates to cash flows that are solely payments of principal and interest on the principal amount outstanding (the contractual cash flows characteristics test).

b) Impairment of financial assets

The impairment model under IFRS 9 reflects expected credit losses, as opposed to incurred credit losses under IAS 39. Under the impairment approach in IFRS 9, it is no longer necessary for a credit event to have occurred before credit losses are recognised. Instead, a group always accounts for expected credit losses and changes in those expected credit losses. The amount of expected credit losses should be updated at each reporting date to reflect changes in credit risk since initial recognition.

The group recognizes loss allowances for Expected Credit Losses (ECL) on the following financial instruments that are not measured at FVTPL:

Financial assets that are debt instruments, Lease receivables, Loan and receivables, Financial guarantee contracts issued; and Loan commitments issued. The group measures expected credit losses and recognizes interest income on risk assets based on the following stages:

Unaudited Financial Statement
For the year ended 31 December 2023

Stage 1: Assets that are performing. If credit risk is low as of the reporting date or the credit risk has not increased significantly since initial recognition, the group recognize a loss allowance at an amount equal to 12-month expected credit losses. This amount of credit losses is intended to represent lifetime expected credit losses that will result if a default occurs in the 12 months after the reporting date, weighted by the probability of that default occurring.

Stage 2: Assets that have significant increases in credit risk. In instances where credit risk has increased significantly since initial recognition, the group measures a loss allowance at an amount equal to full lifetime expected credit losses. That is, the expected credit losses that result from all possible default events over the life of the financial instrument. For these debt instruments, interest income recognition will be based on the EIR multiplied by the gross carrying amount.

Stage 3: Credit impaired. For debt instruments that have both a significant increase in credit risk plus observable evidence of impairment.

The group's process to assess changes in credit risk is multi-factor and has three main elements;

- I. Quantitative element , a quantitative comparison of PD at the reporting date and PD at initial recognition
- II. Qualitative elements
- III. Backstop indicators

For individually significant exposures such as corporate and commercial risk assets, the assessment is driven by the internal credit rating of the exposure and a combination of forward-looking information that is specific to the individual borrower and forward-looking information on the macro economy, commercial sector (to the extent such information has not been already reflected in the rating process).

For other exposures, significant increases in credit risk is made on a collective basis that incorporates all relevant credit information, including forward-looking macroeconomic information. For this purpose, the group groups its exposures on the basis of shared credit risk characteristics.

Significant increase in credit risk

The group decision on whether expected credit losses are based on 12-month expected credit losses or lifetime expected credit losses depends on whether there has been a significant increase in credit risk since initial recognition. An assessment of whether credit risk has increased significantly is made at each reporting date. When making the assessment, the group uses the change in the risk of a default occurring over the expected life of the financial instrument instead of the change in the amount of expected credit losses. This forms the basis of stage 1, 2 and 3 classification and subsequent migration.

The group applies qualitative and quantitative criteria for stage classification and for its forward and backward migration

i) Assets carried at amortised cost

The amount of the loss is measured as the difference between the asset's carrying amount and the present value of estimated future cash flows (excluding future credit losses that have not been incurred) discounted at the financial asset's original effective interest rate. The carrying amount of the asset is reduced through the use of an allowance account and the amount of the loss is recognised in income statement. If a financial instrument has a variable interest rate, the discount rate for measuring any impairment loss is the current effective interest rate determined under the contract.

The calculation of the present value of the estimated future cash flows of a collateralised financial asset reflects the cash flows that may result from disposal less costs for obtaining and selling the collateral, whether or not disposal is probable.

For the purposes of a collective evaluation of impairment, financial assets are grouped on the basis of similar credit risk characteristics (i.e. on the basis of the group's grading process that considers asset type, industry, geographical location, collateral type, past-due status and other relevant factors). Those characteristics are relevant to the estimation of future cash flows for groups of such assets by being indicative of the debtors' ability to pay all amounts due according to the contractual terms of the assets being evaluated.

Future cash flows in a group of financial assets that are collectively evaluated for impairment are estimated on the basis of the contractual cash flows of the assets in the group and historical loss experience for assets with credit risk characteristics similar to those in the group. Historical loss experience is adjusted on the basis of current observable data to reflect the effects of current conditions that did not affect the period on which the historical loss experience is based and to remove the effects of conditions in the historical period that do not currently exist.

Unaudited Financial Statement
For the year ended 31 December 2023

Estimates of changes in future cash flows for groups of assets are reflected and directionally consistent with changes in related observable data from period to period (for example, changes in unemployment rates, property prices, payment status, or other factors indicative of changes in the probability of losses in the group and their magnitude). The methodology and assumptions used for estimating future cash flows are reviewed regularly by the group to reduce any differences between loss estimates and actual loss experience.

When a loan is uncollectible, it is written off against the related allowance for loan impairment. Such loans are written off after all the necessary procedures have been completed and the amount of the loss has been determined. Impairment charges relating to loans and advances to staff are classified in 'impairment charge for credit losses' whilst impairment charges relating to investment securities (loans and receivables categories) are classified in 'Net gains/(losses) on investment securities'.

If, in a subsequent period, the amount of the impairment loss decreases and the decrease can be related objectively to an event occurring after the impairment was recognised (such as an improvement in the debtor's credit rating), the previously recognised impairment loss is reversed by adjusting the allowance account. The amount of the reversal is recognised in profit or loss.

ii) Assets classified as fair value through other comprehensive income

The group can choose to make an irrevocable election at initial recognition for investments in equity instruments that do not meet the definition of held for trading, which would otherwise be measured at fair value through profit or loss, to present changes in fair value in other comprehensive income.

Reclassification of amounts recognised in other comprehensive income and accumulated in equity to profit or loss is not done. This applies throughout the life of the instrument and also at derecognition; such investments will not be subject to the impairment requirements.

Dividends on investments in equity instruments with gains and losses irrevocably presented in other comprehensive income are recognised in profit or loss if the dividend is not a return on investment (like dividends on any other holdings of equity instrument) when:

- a. the group's right to receive payment of the dividend is established;
- b. it is probable that the economic benefits associated with the dividend will flow to the group; and
- c. the amount of the dividend can be measured reliably.

For debt instruments measured at FVTOCI, changes in fair value is recognised in other comprehensive income, except for: interest calculated using the effective interest rate method, foreign exchange gains or losses and; impairment gains or losses until the financial asset is derecognised or reclassified.

When the financial asset is derecognised, the cumulative gain or loss previously recognised in other comprehensive income is reclassified from equity to profit or loss as a reclassification adjustment. Also, when a debt instrument asset is measured at fair value through other comprehensive income, the amounts that are recognised in profit or loss are the same as the amounts that would have been recognised in profit or loss if the financial asset had been measured at amortised cost.

c) Reclassification of financial assets

Reclassification of financial assets is determined by the group's senior management, and is done as a result of external or internal changes which are significant to the group's operations and demonstrable to external parties.

Reclassification of financial assets occurs when the group changes its business model for managing financial assets.

Investments in equity instruments that are designated as at FVTOCI at initial recognition cannot be reclassified because the election to designate as at FVTOCI is irrevocable.

STATEMENT OF SIGNIFICANT ACCOUNTING POLICIES

Financial liabilities

Classification and subsequent measurement

The Company's holding in financial liabilities represents mainly Insurance Contract Liabilities, 'trade payables' and 'other liabilities'. These are all classified as financial liabilities measured at amortised cost. These financial liabilities are initially recognised at fair value and subsequently measured at amortised cost. Any difference between the proceeds net of transaction costs and the redemption value is recognised in the income statement over the period of the borrowing using the effective interest rate method.

Fees paid on the establishment of the liabilities are recognised as transaction costs of the loan to the extent that it is probable that some or all of the facility will be drawn down. In this case, the fee is deferred until the draw down occurs. To the extent that there is no evidence that it is probable that some or all of the facility will be drawn down, the fee is capitalized as a pre-payment for liquidity services and amortised over the period of the facility to which it relates.

The classification of the Company's financial instruments have been summarised in the table below:

Category		Classes as determined by The Group		Subclasses
Financial assets	Financial assets at fair value through profit or loss	Listed Securities		Quoted Equities
	Amortized cost	Cash and balances with Central bank of Nigeria		Cash
				Statutory deposit with CBN
				Current account balances
				Placements
		Loans and advances		FGN Treasury Bills
				Staff loans
		Investment securities	Listed debt	Corporate bonds
		Other assets		Fees receivable
				Intercompany receivable
				Other receivables
	Fair value through other comprehensive income	Listed Securities		Quoted Equities
				Unquoted Equities
		Unlisted securities		
Financial liabilities	Financial liabilities at amortised cost	Insurance contract liabilities		Accruals
				Payables
		Trade payables		Other creditors
				Outstanding claims
				Unearned premiums
		Other liabilities		

Measurement

All financial instruments are measured initially at their fair value plus transaction costs, except in the case of financial assets and financial liabilities recorded

Amortised cost measurement

The amortised cost of a financial asset or liability is the amount at which the financial asset or liability is measured at initial recognition, minus principal repayments, plus or minus the cumulative amortisation using the effective interest method of any difference between the initial amount recognised and the maturity amount, minus any reduction for impairment.

Fair value measurement

Fair value is the price that would be received to sell an asset or paid to transfer a liability in an orderly transaction between market participants at the measurement date

At initial recognition, the best evidence of the fair value of a financial instrument is the transaction price (i.e. the fair value of the consideration paid or received), unless the fair value of that instrument is evidenced by comparison with other observable current market transactions in the same instrument, without modification or repackaging, or based on valuation techniques such as discounted cash flow models and option pricing models whose variables include only data from observable markets.

Subsequent to initial recognition, for financial instruments traded in active markets, the determination of fair values of financial assets and financial liabilities is based on quoted market prices or dealer price quotations. This includes listed equity securities and quoted debt instruments on major exchanges (for example, Nigerian Stock Exchange (NSE) and Financial Markets Dealers Quotation (FMDQ)).

A financial instrument is regarded as quoted in an active market if quoted prices are readily and regularly available from an exchange, dealer, broker, industry company, pricing service or regulatory agency, and those prices represent actual and regularly occurring market transactions on an arm's length basis. If the above criteria are not met, the market is regarded as being inactive. Indications that a market is inactive are when there is a wide bid-offer spread or significant increase in the bid-offer spread or there are few recent transactions.

STATEMENT OF SIGNIFICANT ACCOUNTING POLICIES

For all other financial instruments, fair value is determined using valuation techniques. In these techniques, fair values are estimated from observable data in respect of similar financial instruments, using models to estimate the present value of expected future cash flows or other valuation techniques, using inputs existing at the dates of the statement of financial position.

Forward-Looking Information

In the context of IFRS 9, is an enhanced information set that includes credit information pertaining to future developments (including for example macroeconomic developments). The inclusion of forward-looking information along with traditional past due (realized, historical) information is considered to produce comprehensive credit risk information.

The inclusion of forward-looking information is a distinctive feature of an IFRS 9 ECL model. Incorporating economically stressed states of the world and their potential impact on credit performance is critical for the timely recognition of credit

2.5 Trade receivables

Trade receivables are recognized when due. They premium receivables arising from insurance contracts issued and include amounts due from agents, brokers and insurance contract holders. Premium receivables are those for which credit notes issued by brokers are within 30days, in conformity with the "NO PREMIUM NO COVER" NAICOM policy.

2.6 Reinsurance

The Company cedes business to reinsurers in the normal course of business for the purpose of limiting its net loss potential through the transfer of risks on the bases of treaty and facultative agreements. Premium ceded comprise gross written premiums. Reinsurance arrangements do not relieve the Company from its direct obligations to its policyholders. In the course of ceding out business to reinsurers, the Company incurs expenses. This is recognized as reinsurance expense in the statement of profit or loss.

2.6.1 Reinsurance assets

Reinsurance assets represent balances due from reinsurance companies. Amounts recoverable from reinsurers are estimated in a manner consistent with settled claims associated with the reinsurer's policies and are in accordance with the related reinsurance contract.

2.6.2 Reinsurance Liabilities

Reinsurance liabilities are primarily premiums payable for reinsurance contracts and are recognised as an expense when due. The company has the right to set-off re-insurance payables against amount due from re-insurance and brokers in line with the agreed arrangement between both parties.

2.7 Deferred Policy Acquisition Costs (DAC)

Acquisition cost comprise all direct and indirect costs arising from the writing of non-life insurance contracts. Deferred acquisition costs represent a proportion of commission which are incurred during a financial year and are deferred to the extent that they are recoverable out of future revenue margins. It is calculated by applying to the acquisition expenses that ratio of unearned premium to written premium.

2.8 Prepayment

Prepayments include amounts paid in advance by the Company on rent, staff benefits, vehicle repairs etc. Expenses paid in advance are amortized on a straight line basis to the profit and loss account.

2.9 Consolidation**2.9.1 Subsidiaries**

The financial statements of subsidiaries are consolidated from the date the company acquires control, up to the date that such effective control ceases. For the purpose of these financial statements, subsidiaries are entities over which the company, directly or indirectly, has the power to govern the financial and operating policies so as to obtain benefits from their activities.

Changes in the company's interest in a subsidiary that do not result in a loss of control are accounted for as equity transactions (transactions with owners). Any difference between the amount by which the non-controlling interest is adjusted and the fair value of the consideration paid or received is recognised directly in equity and attributed to the company.

Inter-company transactions, balances and unrealised gains on transactions between companies within the company are eliminated on consolidation. Unrealised losses are also eliminated in the same manner as unrealised gains, but only to the extent that there is no evidence of impairment.

Accounting policies of subsidiaries have been changed where necessary to ensure consistency with the policies adopted by the company. Investment in subsidiaries in the separate financial statements of the parent entity is measured at cost.

Acquisition-related costs are expensed as incurred.

If the business combination is achieved in stages, fair value of the acquirer's previously held equity interest in the acquiree is re-measured to fair value at the acquisition date through profit or loss.

2.9.1a Disposal of Subsidiaries

On loss of control, the company derecognizes the assets and liabilities of the subsidiary, any controlling interest and the other components of equity related to the subsidiary. Any surplus or deficit arising on the loss of control is recognised in profit or loss. If the company retains any interest in the previous subsidiary, then such interest is measured at fair value at the date that control is lost. Subsequently, that retained interest is accounted for as equity accounted investee or as an available-for-sale financial asset depending on the level of influence retained.

2.9.2 Investment in Associates

As associate is an entity over which the company has significant influence and that is neither a subsidiary nor an interest in a joint venture. Significant influence is the power to participate in the financial and operating policy decisions of the investee but is not control or joint control over those policies.

The results and assets and liabilities of associates are incorporated in these consolidated financial statements using the equity method accounting, except when the investment is classified as held for sale, in which case it is accounted for in accordance with IFRS 5 - Noncurrent Asset Held for Sale and Discontinued Operations. Under the equity method, an investment in an associate is initially recognised in the consolidated statement of financial position at cost and adjusted thereafter to recognize the company's share of the profit or loss and other comprehensive income of the associate. When the company's share of losses of an associate exceeds the company's interest in that associate (which includes any long-term interest that, in substance, form part of the company's net investment in the associate), the company discontinues recognizing its share of further losses. Additional losses are recognised only to the extent that the company has incurred legal or constructive obligations or made payments on behalf of the associate.

Any excess of the cost of acquisition over the company's share of the net fair value of the identifiable assets, liabilities and contingent liabilities of an associate recognised at the date of acquisition is recognised as goodwill, which is included within the carrying amount of the investment. Any excess of the company's share of the net fair value of the identifiable assets, liabilities and contingent liabilities over the cost of acquisition, after reassessment, is recognised immediately in profit or loss.

The requirements of IAS 36 are applied to determine whether it is necessary to recognize any impairment loss with respect to the company's investment in an associate. When necessary, the entire carrying amount of the investment (including goodwill) is tested for impairment in accordance with IAS 36 Impairment of Assets as a single asset by comparing its recoverable amount (higher of value in use and fair value less costs to sell) with its carrying amount. Any impairment loss recognised forms part of the carrying amount of the investment. Any reversal of that impairment loss is recognised in accordance with IAS 36 to the extent that the recoverable amount of the investment subsequently increases.

When a company entity transacts with its associate, profits and losses resulting from the transactions with the associate are recognised in the company's consolidated financial statements only to the extent of interests in the associate that are not related to the company.

2.10 Investment Properties

Investment property is property held on earn rentals or for capital appreciation or both. Investment property, including interest in leasehold land, is initially recognised at cost including the transaction costs. Subsequently, investment property is accried at fair value representing the open market value at the statement of financial position date determined by annual valuation carried out by external registered valuers. gains or losses arising from changes in the fair value are included in determining the profit or loss for the year to which they relate.

Investment properties are derecognized when either they have been disposed off or when the investment property is permanently withdrawn from use and no future economic benefit is expected from its disposal. On disposal of an investment property, the difference between the disposal proceeds and the carrying amount is charged or credited to profit or loss.

Transfers are made to or from investment property only when there is a change in use. For a transfer from investment property to owner occupied property, the deemed cost for subsequent accounting is the fair value at the date of change in use. If owner occupied property becomes an investment property, the company accounts for such property in accordance with the policy stated under property and equipment up to the date of the change in use

When the company completes the construction or development of a self-constructed investment property, any difference between the fair value of the property at that date and its previous carrying amount is recognised in the income statement.

2.11 Intangible Assets

Software license costs and computer software that is not an integral part of the related hardware are initially recognised at cost, and subsequently carried at cost less accumulated amortization and accumulated impairment losses. Costs that are directly attributable to the production of identifiable computer software products controlled by the company are recognised as intangible assets.

Amortization is calculated using the straight line method to write down the cost of each license or item of software to its residual value over its estimated useful life.

Amortization begins when the asset is available for use, i.e. when it is in the location and condition necessary for it to be capable of operating in the manner intended by management, even when idle. Amortization ceases at the earlier date that the asset is classified as held for sale and the date that the asset is derecognized and ceases temporarily, while the residual value exceeds or is equal to the carrying value.

Gains or losses arising from derecognition of an intangible asset are measured as the difference between the net disposal proceeds and the carrying amount of the asset and are recognised in the income statement when the asset is derecognized.

Intangibles recognised as assets are amortized over their useful lives, which does not exceed five years.

2.12 Goodwill

Goodwill arising on an acquisition of a business is carried at cost as established at the date of acquisition of the business less accumulated impairment losses, if any. For the purposes of impairment testing, goodwill is allocated to each of the company's cash generating units (or companies of cash-generating units) that is expected to benefit from the synergies of the combination.

A cash-generating unit to which goodwill has been allocated is tested for impairment annually, or more frequently when there is indication that the unit may be impaired. If the recoverable amount of the cash-generating unit is less than its carrying amount, the impairment loss is allocated first to reduce the carrying amount of any goodwill allocated to the unit and then to the other assets of the unit pro rata based on the carrying amount of each in the unit. Any impairment loss for goodwill is recognised directly in profit or loss in the consolidated (statement of comprehensive income/income statement). An impairment loss recognised for goodwill is not reversed in subsequent periods. On disposal of the relevant cash-generating unit, the attributable amount of goodwill is included in the determination of the profit or loss on disposal.

2.13 Property, Plant and Equipment**a. Recognition and measurement**

All categories of property and equipment are initially recognised at cost. Cost includes expenditure directly attributable to the acquisition of the assets. Computer software, including the operating system that is an integral part of the related hardware is capitalized as part of the computer equipment

Work in progress owner-occupied property that are included in property, plant and equipment are stated at cost to date and are not yet decommissioned as the asset has not been put into use.

b. Subsequent cost

Subsequent cost are included in the asset's carrying amount or recognised as a separate asset, as appropriate, only when it is probable that future economic benefits associated with the item will flow to the company and the cost of the item can be measured reliably. Repairs and maintenance expenses are charged to the income statement in the year in which they are incurred.

Increases in the carrying amount arising on revaluation are recognised in other comprehensive income and accumulated in equity under the heading of revaluation surplus. Decreases that offset previous increases of the same asset are recognised in other comprehensive income. All other decreases are charged to the statement of profit or loss.

c. Depreciation

Depreciation is calculated using the straight line method to write down the cost or the revalued amount of each asset to its residual value over its estimated useful life using the following annual rates:

Leasehold land	0%	Over the lease period
Buildings	2%	2%
Furniture & Fittings	20%	20%
Office Equipment	20%	20%
Computer Equipment	20%	20%
Plant & Equipment	20%	20%
Motor Vehicles	25%	25%

Freehold land is not depreciated. Depreciation on an item of property, plant and equipment commences when it is available for use and continues to depreciate until it is derecognized, even if during that period the item is idle. Depreciation of an item ceases when the item is retired from active use and is being held for disposal.

Where no parts of items of property, plant and equipment have a cost that is significant in relation to the total cost of the item, the same rate of depreciation is applied to the whole item.

The assets' residual values, depreciation method and useful lives are reviewed, and adjusted if appropriate, at each statement of financial position date.

d. Revaluation of land and building.

land and building initially recorded at cost are subsequently carried at revalued amount being the fair value at the date of revaluation less any subsequent accumulated depreciation and subsequent accumulated impairment losses. Revaluations are made with sufficient regularity such that the carrying amount does not differ materially from that which would be determined using fair value at the end of the reporting period.

When land and building are revalued, any increase in its carrying amount (as a result of revaluation) is transferred to a revaluation reserve, except to the extent that it reverses a revaluation decrease of the same property previously recognised as an expense in the profit or loss. When the value of a land or building is decreased as a result of a revaluation, the decrease is charged against any related credit balance in the revaluation reserve in respect of that land or building. However, to the extent that it exceeds any surplus, it is recognised as an expense in profit or loss. When revalued land and building are being depreciated, part of the surplus is being realized as the asset is used. The amount of the surplus realized is the difference between the depreciation charged on the revalued amount and the lower depreciation which would be charged to revaluation reserve and accumulated losses but not through profit or loss. The revaluation of land and building is carried out every year.

e. Derecognition

An item of property and equipment is derecognized upon disposal or when no future economic benefits are expected from its use or disposal. Gains and losses on disposal of property and equipment are determined by reference to their carrying amounts and are taken into account in determining operating profit.

Gains and losses on disposal of property and equipment are determined by reference to their carrying amounts and are taken into account in determining operating profit.

2.14 Statutory Deposits

Statutory Deposit represents 10% of the paid up capital of the Company deposited with the Central Bank of Nigeria (CBN) pursuant to Section 10(3) of the Insurance Act 2003. Statutory deposit is measured at cost.

2.15 Insurance Contract Liabilities

Contract that are classified as insurance contracts are those under which the company underwrites significant insurance risk from another party (the broker or insured) by agreeing to compensate the insured or other beneficiary if a fortuitous random event (the insured event) adversely affects the policyholder or other beneficiary.

2.15.1 Types of Insurance Contracts

Insurance contract may be non-life or life. The company issues only non-life insurance contracts. Non-life insurance contracts are accident, casualty and property insurance contracts.

Accident and casualty insurance contracts protect the company's customers against the risk of causing harm to third parties as result of their legitimate activities. Damages covered include both contractual and non-contractual events. The typical protection offered is designed for employers who become legally liable to pay compensation to injured employees (employers' liability) and for individual and business customers who become liable to pay compensation to a third party for bodily harm or property damage (public liability).

Property insurance contracts mainly compensate the company's customers for damage suffered to their properties or for the value of property lost. Customers who undertake commercial activities on their premises could also receive compensation for the loss of earnings caused by the inability to use the insured properties in their business activities (business interruption cover).

Non-life insurance contracts protect the company's customers from the consequences of events (such as death or disability) that would affect the ability of the customer or his/her dependants to maintain their current level of income. Guaranteed benefits paid on occurrence of the specified insurance event are either fixed or linked to the extent of the economic loss suffered by the policy holder. there are no maturity or surrender benefits.

2.15.2 Recognition and measurement of non-life insurance contracts

a. For all non-life insurance contract, premiums are recognised as revenue (earned premiums) proportionally over the period of coverage. The portion of premium received on in-force contracts that relates to unexpired risks at the balance sheet date is reported as the unearned premium liability. Premiums are shown before deduction of commission.

Claims and loss adjustment expenses are charged to income as incurred based on the estimated liability for compensation owed to contract holders or third parties damaged by the contract holders. They include direct and indirect claims settlement costs and arise from events that have occurred up to the end of the reporting period even if they have not yet been reported to the company. The company does not discount its liabilities for unpaid claims.

Liabilities for unpaid claims are estimated using the input of assessments for individual cases reported to the company and statistical analyses for the claims incurred but not reported, and to estimate the expected ultimate cost of more complex claims that may be affected by external factors (such as court decisions).

b. Salvages

Some non-life insurance contracts permit the company to sell (usually damaged) property acquired in the process of settling a claim. The company may also have the right to pursue third parties for payment of some or all costs of damages to its client's property (i.e. subrogation right).

Salvage recoveries are used to reduce the claim expense when the claim is settled.

c. Subrogation

Subrogation is the right for an insurer to pursue a third party that caused an insurance loss to the insured. This is done as a means of recovering the amount of the claim paid to the insured for the loss. A receivable for subrogation is recognized in other assets when the liability is settled and the company has the right to receive future cash flow from the third party.

d. Deferred Income

Deferred Income represents a proportion of commission received on reinsurance contracts which are booked during a financial year and are deferred to the extent that they are recoverable out of future revenue margins. It is calculated by applying to the reinsurance commission income the ratio of prepaid reinsurance to reinsurance cost.

e. Reinsurance Contracts held

Contracts entered into by the company with reinsurers under which the company is compensated for losses on one or more contracts issued by the company and that meet the classification requirements for insurance contracts are classified as reinsurance contracts held. Contracts that do not meet these classification requirements are classified as financial assets. Insurance contracts entered into by the company under which the contract holder is another insurer (inwards reinsurance) are included with insurance contracts.

f. Technical Reserves

These are computed in accordance with the provisions of section 22 of the Insurance Act 2003 as follows:

* Reserve for unearned premium: In compliance with Section 20(1) (a) of Insurance Act 2003, the reserve for unearned premium is calculated on a time apportionment basis in respect of the risks accepted during the year.

* Reserve for outstanding claims: The reserve for outstanding claims is maintained at the total amount of outstanding claims incurred and reported plus claims incurred but not reported ("IBNR") as at the balance sheet date. The IBNR is based on the liability adequacy test.

g. Liability Adequacy Test

At each end of the reporting period, liability adequacy tests are performed by an Actuary to ensure the adequacy of the contract liabilities net of related DAC assets. In performing these tests, current best estimates of future contractual cash flows and claims handling and administration expenses, as well as investment income from the assets backing such liabilities, are used. Any deficiency is immediately charged to profit or loss initially by writing off DAC and by subsequently establishing a provision for losses arising from liability adequacy tests "the unexpired risk provision".

The provisions of the Insurance Act 2003 require an actuarial valuation for life insurance reserves only. However, IFRS 4 requires a liability adequacy test for both life and non-life insurance reserves. The provision of section 59 of the Financial Reporting Council Act 2011 gives superiority to the provision of IFRS and since it results in a more conservative reserving than the provision of the Insurance Act 2003, it serves the company's prudential concerns well.

2.16 Trade and other Payables

Trade and other payables are recognised initially at fair value and subsequently measured at amortized cost using the effective interest method. The fair value of a non-interest bearing liability is its discounted repayment amount. If the due date of the liability is less than one year discounting is omitted.

2.17 Retirement Benefit Obligations

Pension Cost

The company operates a defined contributory retirement benefit scheme as stipulated in the Pension Reform Act 2014. Under the defined contribution scheme, the company pays fixed contributions of 10% of emoluments as defined by the Act to Pension Fund Administrators; employees also pay a fixed percentage of 8% to the same entity. Once the contributions have been paid, the company retains no legal or constructive obligation to pay further contribution if the fund does not hold sufficient assets to finance benefits accruing under the retirement benefit plan.

2.18 Provisions

General Provisions are recognised when the company has a present obligation (legal or constructive) as a result of a past event, and it is probable that an outflow of resources embodying economic benefits will be required to settle the obligation and a reliable estimate can be made of the amount of the obligation. Where the company expects some or all of a provision to be reimbursed, the reimbursement is recognised as a separate asset but only when the reimbursement is virtually certain. The expense relating to any provision is presented in the income statement net of any reimbursement. If the effect of the time value of money is material, provisions are discounted using a current pre-tax rate that reflects, where appropriate, the risks specific to the liability. Where discounting is used, the increase in the provision due to the passage of time is recognised as a finance cost.

2.19 Current Income Tax

Current income tax is the amount of income tax payable on the taxable profit for the year determined in accordance with the Nigeria Income Tax Act. The tax rates and tax laws used to compute the amount are those that are enacted or substantively enacted as at the reporting date.

2.19.1 Deferred Income Tax

Deferred income tax is provided in full on all temporary differences except those arising on the initial recognition of an asset or liability.

Deferred income tax is determined using the liability method on all temporary differences arising between the tax bases of assets and liabilities and their carrying values for financial reporting purposes, using tax rates and laws enacted or substantively enacted at the statement of financial position date and expected to apply when the related deferred income tax asset is realized or the deferred tax liability is settled.

Deferred income tax assets are recognised only to the extent that it is probable that future taxable profits will be available against which the temporary differences can be utilized. The carrying amount of deferred tax assets is reviewed at each reporting date and reduced to the extent that it is no longer probable that sufficient taxable profit will be available to allow all or part of the deferred income tax asset to be utilized. unrecognized deferred tax assets are reassessed at each reporting date and are recognised to the extent that it has become probable that future taxable profit will allow the deferred tax asset to be recovered.

Deferred tax assets and liabilities are measured at the tax rates that are expected to apply to the year when the asset is realized or the liability is settled, based on tax rates (and tax laws) that have been enacted or substantively enacted at the reporting date.

Deferred tax relating to items recognised outside profit or loss is recognised outside profit or loss. Deferred tax items are recognised in correlation to the underlying transaction either in other comprehensive income or directly in equity.

Deferred tax assets and deferred tax liabilities are offset, if a legally enforceable right exists to set off such:

- * Current tax assets against current income tax liabilities and
- * The deferred taxes relate to the same taxable entity and
- * The same taxation authority

2.20 Share Capital and Share Premium

Ordinary shares are recognized at par value and classified as 'share capital' inequity. Any amounts received over and above the par value of the shares issued are classified as 'share premium' in equity.

2.21 Statutory Contingency Reserve

The company maintains contingency reserves in accordance with the provisions of Insurance Act 2003 to cover fluctuations in securities and variations in statistical estimates at the rate equal to the higher of 3% of total premium or 20% of the net profits

2.22 Retained Earnings

The retained earnings represent the amount available for dividend distribution to the equity shareholders of the company. See statement of changes in equities for movement in retained earnings.

2.23 Assets Revaluation Reserve

This represents the company's revaluation reserve emanating from revaluation of certain assets

2.24 Income Recognition

2.24.1 Gross Premiums

Gross premiums on insurance contract are recognized as revenue when payable by the policy holder.

For single premium business revenue is recognised on the date on which the policy is effect.

Gross insurance written premiums comprise the total premiums receivable for the whole period of cover provided by contracts entered into during the accounting period and are recognised on the date on which the policy incepts.

Premiums include any adjustments arising in the accounting period for premiums receivable in respect of business written in prior accounting periods.

Premiums collected by intermediaries, but not yet received, are assessed based on estimates from underwriting or past experience and are included in premiums written.

Unearned premiums are those proportions of premiums written in a year that relate to periods of risk after the statement of financial position date. Unearned premiums are calculated on a daily pro rata basis. The proportion attributable to subsequent periods is deferred as a provision for unearned premiums.

2.24.2 Reinsurance Premiums

Gross reinsurance premiums on insurance contracts are recognized as an expense when payable or on the date on which the policy is effective. Gross reinsurance premiums written comprise the total premiums payable for the whole cover provided by contracts entered into the period and are recognised on the date on which the policy incepts.

Premiums include any adjustments arising in the accounting period in respect of reinsurance contracts incepting in prior accounting periods.

Unearned reinsurance premiums are those proportions of premiums written in a year that relate to periods of risk after the statement of financial position date. Unearned premiums are deferred over the term of the underlying direct insurance policies for risks attaching contracts and over the term of the reinsurance contract for losses-occurring contracts.

2.24.3 Commission income

Fees and commission income during the year is the income the company is entitled to for ceding businesses to the reinsurers and co-insurers. In accordance with IFRS 15 (Revenue from Contracts with Customers), fees and commission income is recognized over time, covering the policy period over which services are expected to be provided, using the time apportionment basis. Fees and commission covering the reporting period are recognized in profit or loss as fees and commission income earned, while the unearned portion of fees and commission income is reported in the statement of financial position as deferred commission income.

2.24.4 Investment Income

Interest income is recognised in the income statement as it accrues and is calculated by using the effective interest rate method. Fees and commissions that are an integral part of the effective yield of the financial asset or liability are recognised as an adjustment to the effective interest rate of the instrument.

Investment income also includes dividend income which is recognised when the right to receive the payment is established.

Rental income arising from operating leases on investment properties is accounted for on a straight line basis over the lease terms.

2.24.5 Management and Administrative Fees

Management Fee

Management fee, an asset based fee is charged as a percentage of the opening net assets value of the pension fund investments at the beginning of the year of charge for the Retirement Savings Account (RSA). It is accrued daily upon portfolio valuation while the actual charge is effected against the Fund within five working days of the month end. Fee for the Retiree Account is computed based on 5% of income earned on the fund.

Administrative Fee

Administrative fee is calculated as a flat charge payable monthly from contributions received. It is deducted before converting contributions into accounting units of pension fund assets.

2.24.6 Realized/Unrealized Gains and Losses

Realized or unrealized gains and losses recorded in the income statement on investments include gains and losses on financial assets and investment properties. Gains and losses on the sale of investments are calculated as the difference between net sales of investments are calculated as the difference between net sales proceeds and the original carrying or amortized cost and are recorded on occurrence of the sale transaction

2.25 Claims Expenses Recognition

2.25.1 Gross Claims Incurred

Claims incurred in respect of Insurance contracts include the cost of all claims arising during the year including internal and external claims, handling costs that are directly related to the processing and settlement of claims as well as changes in the gross valuation of insurance. All claims paid and incurred are charged against the underwriting income as expense when Incurred. This is shown in the statement of profit or loss before determining underwriting results.

2.25.2 Reinsurance Claims

Reinsurance claims are recognised when the related gross insurance claim is recognised according to the terms of the relevant contract.

2.26 Interest Income

Interest income is recognised using the effective interest method for debt instruments measured subsequently at amortised cost and at FVTOCI. For financial assets other than purchased or originated credit-impaired financial assets, interest income is calculated by applying the effective interest rate to the gross carrying amount of a financial asset, except for financial assets that have subsequently become credit-impaired. For financial assets that have subsequently become credit-impaired, interest income is recognised by applying the effective interest rate to the amortised cost of the financial asset. If, in subsequent reporting periods, the credit risk on the credit-impaired financial instrument improves so that the financial asset is no longer credit-impaired, interest income is recognised by applying the effective interest rate to the gross carrying amount of the financial asset.

For purchased or originated credit-impaired financial assets, interest income is recognized by applying the credit-adjusted effective interest rate to the amortised cost of the financial asset from initial recognition. The calculation does not revert to the gross basis even if the credit risk of the financial asset subsequently improves so that the financial asset is no longer credit-impaired. Interest income is recognised in profit or loss and is included in the "investment income - interest income" line item.

2.27 Expenses

Expenses are recognised in the income statement when a decrease in future economic benefit related to a decrease in an asset or an increase of a liability has arisen that can be measured reliably. This means, in effect, that recognition of expenses occurs simultaneously with the recognition of an increase in liabilities or a decrease in assets (for example, the accrual of employee entitlements or the depreciation of equipment)

When economic benefits are expected to arise over several accounting periods and the association with income can only be broadly or indirectly determined, expenses are recognised in the income statement on the basis of systematic and rational allocation procedures.

This is often necessary in recognizing the equipment associated with the using up of assets such as property, plant and equipment in such cases the expense is referred to as a depreciation or amortization. These allocation procedures are intended to recognise expenses in the accounting periods in which the economic benefits associated with these items are consumed or expire. an expense is recognised immediately in the income statement when expenditure produces no future economic benefits or when, and to the extent that future economic benefits do not qualify, or cease to qualify, for recognition in the statement of financial position as an asset.

2.27.1 Underwriting Expenses

Underwriting expenses comprise acquisition costs and other underwriting expenses. Acquisition costs comprise all direct and indirect costs arising from writing insurance contracts. These costs are charged in the income statement in the period they are incurred.

2.28 Impairment of non-financial assets

The company assesses at each reporting date whether there is an indication that an asset may be impaired. If any such indication exists, or when annual impairment testing for an asset is required, the company estimates the asset's recoverable amount. An impairment loss is recognised for the amount by which the asset's carrying amount exceeds its recoverable amount. an asset's recoverable amount is the higher of an asset's or cash generating unit's fair value less costs to sell and its value in use.

The recoverable amount is determined for an individual asset, unless the asset does not generate cash inflows that are largely independent of those from other assets or companies' assets. In assessing value in use, the estimated future cash flows are discounted to their present value using a pre-discount rate that reflects current market assessments of the time value of money and the risks specific to the asset. in determining fair value less costs to sell, an appropriate valuation model is used.

Impairment losses of continuing operations are recognised in the income statement in those expense categories consistent with the function of the impaired asset, except for property previously revalued where the revaluation was taken to comprehensive income. in this case the impairment is also recognised in comprehensive income up to the amount of any previous revaluation.

An assessment is made at each reporting date as to whether there is any indication that previously recognised impairment losses may no longer exist or may have decreased. If such indication exists, the company makes an estimate of recoverable amount. A previous impairment loss is reversed only if there has been a change in the estimates used to determine the asset's recoverable amount since the last impairment loss was recognised. if that is the case the carrying amount of the asset is increased to its recoverable amount.

The increased amount cannot exceed the carrying amount that would have been determined, net of depreciation, had no impairment loss been recognised for the asset in prior years. Such reversal is recognised in the income statement unless the asset is carried at revalued amount, in which case the reversal is treated as a revaluation increase.

2.29 Earnings Per Share

The company presents basic earnings per share for its ordinary shares. Basic earnings per share are calculated by dividing the profit attributable to ordinary shareholders of the company by the number of shares outstanding during the period.

Diluted EPS is determined by adjusting the profit or loss attributable to ordinary shareholders and the weighted average number of ordinary shares outstanding for the effects of all dilutive potential ordinary shares.

2.30 Dividends

Dividends on ordinary shares are recognised as a liability in the year in which they are approved by the company's shareholders. Proposed dividends are not recognised in equity until they have been declared at a general meeting. Dividends for the year that are approved after the statement of financial position date are dealt with as a non-adjusting event after the statement of financial position date.

2.31 Comparatives

Where necessary, comparative have been adjusted to conform to changes in presentation in the current year. Where changes are made and affect the statement of financial position, a third statement of financial position at the beginning of the earliest period presented is presented together with the corresponding notes.

2.32 Contingent liabilities

A contingent liability is a possible obligation that arises from past events and whose existence will be confirmed only by the occurrence or non-occurrence of one or more uncertain future events not wholly within the control of the company or the company has a present obligation as a result of past events which is not recognised because it is not probable that an outflow of resources will be required to settle the obligation; or the amount cannot be reliably estimated. Contingent liabilities normally comprise of legal claims under arbitration or court process in respect of which a liability is not likely to crystallise.

2.33 Contingent assets

Contingent assets are not recognised in the financial statements but are disclosed when, as a result of the past events, it is highly likely that economic benefits will flow to the company, but this will only be confirmed by the occurrence or non-occurrence of one or more uncertain future events which are not wholly within the company's control.

GOLDLINK Insurance Plc

Veritas Kapital holds 1,268,064,351 (2022:1,268,314,351) ordinary shares representing 51.53% (2022:51.53%) holdings in Goldlink Insurance Plc as at 31/12/2023.

Goldlink Insurance Plc became associate company of Veritas Kapital in 2011 but was taken over by the regulatory authority - National Insurance Commission (NAICOM) for infraction of insurance regulations and its Board of Directors was dissolved in 2012.

Though Veritas Kapital holds majority shares in Goldlink Insurance Plc. (51.53%) the investment has been treated as an associate and accounted for using equity method at both the Company and Group level.

In arriving at the decision to treat the investment as an associate, the Board of Directors considered if Veritas Kapital has control over Goldlink Insurance Plc based on the requirements of IFRS 10. IFRS 10.5 states that an investor regardless of the nature of its involvement with an entity is required to determine whether it is a parent by assessing whether it controls the investee.

Specifically, IFRS 10 states that an investor controls an investee if and only if the investor has the following:

- Power over the investee;
- Exposure, or rights, to variable returns from its involvement with the investee; and
- The ability to use its power over the investee to affect the amount of the investor's returns.

Based on assessment carried out, Directors concluded that Veritas Kapital does not have the power over the investee because the relevant activities of Goldlink Insurance Plc are subject to direction of the NAICOM instituted Board of Directors. The Board of Directors report directly to NAICOM on all its activities and resolutions are subject to the NAICOM (IFRS 10:B37).

11 Investment properties

Investment property comprises of landed property and building held for the purpose of capital appreciation and rental income and are carried at fair value.

The movement in the fair value of investment properties as at 31 December 2023 is as follows:

	Group 31-Dec-23 N'000	Group 31-Dec-22 N'000	Company 31-Dec-23 N'000	Company 31-Dec-22 N'000	Company 1-Jan-22 N'000
Balance at 1 January	45,000	45,000	45,000	45,000	289,439
Addition	-	-	-	-	-
Disposal	(45,000)	-	(45,000)	-	(244,439)
Fair value gain	-	-	-	-	-
Balance at 31 December (see note 11c)	-	45,000	-	45,000	45,000

Measurement of fair value**a Fair value hierarchy.**

The fair value of the Investment properties has been determined by external, independent professional valuers, Obiora Okafor & Associates, Real Estate surveyors (FRC/2020/003/00000021867) as at 31 December 2022, having appropriate recognised professional qualifications and recent experience in the locations and categories of the Investment properties being valued. The properties have been valued using the depreciated replacement cost and market value approaches. Valuations are performed on an annual basis and the fair value gains and losses are recognised in the profit or loss account. The valuations were based on market data such as discount rates, rental risk and reversionary rates.

The fair value measurement for the investment properties of N45.0 million (2021:N45.0 million) has been categorised as a level 3 fair value based on the inputs into the valuation technique used.

b Valuation technique and significant unobservable inputs

The following table shows the valuation technique used in measuring the fair value of investment properties, as well as the significant unobservable inputs used.

Valuation technique	Significant unobservable inputs	Sensitivity
The fair values are determined by applying the direct market evidence comparative method of valuation to derive the open market value. This valuation model reflects the current price on actual transaction for similar properties in the neighbourhood in recent time. References were made to prices of land and comparable properties in the neighbourhood. The data obtained were analysed and adjustments was made to reflect differences in site area and the actual location, quality of construction and off-site facilities.	- Price per square meter - rate of development in the area - Quality of the building - Influx of people and/or businesses to the area	The estimated fair value would increase(decrease) if the rate of development in the area increases (decreases), quality of the building increases (decreases), influx of people and/or business to the area increases (decreases)

NOTES TO THE FINANCIAL STATEMENTS FOR THE YEAR ENDED 31 DECEMBER 2023

	Company 31-Dec-23 N'000	Company 31-Dec-22 N'000
13 Goodwill		
Balance, beginning of the year	316,884	316,884
Adjustment	-	-
Balance, end of year	<u>316,884</u>	<u>316,884</u>
The goodwill is arising on acquisitions in the following subsidiaries:		
VG Pension	316,884	316,884
Veritas Health Care Limited	-	-
	<u>316,884</u>	<u>316,884</u>
a Analysis of movement		
Balance at 1 January	316,884	316,884
Impairment (see note 33)	-	-
Balance at 31 December	<u>316,884</u>	<u>316,884</u>

The goodwill recognised on acquisition of Veritas Healthcare Limited (N69.56 million) was fully impaired.

The calculation of value-in-use was based on the following key assumptions

- The cashflows were projected based on the company's approved budget. The cashflows were based on past experiences and were adjusted to reflect expected future performances of the company .

-A terminal growth rate averaging 2.8% for VHCL and 4.6% for VGPL (2021: averaging 2.8% for VHCL and 4.6% for VGPL) was applied in determining the terminal cash flows

- Discount rates (averaging 21.88% for VHCL and 30.9% for VGPL), representing post-tax weighted average cost of capital (WACC), was applied in determining the value in use. Using an iterative process, the pre-tax discount rate of 30.3% for VHCL and 44.9% for VGPL was estimated. The growth rate used to extrapolate terminal cashflows for goodwill impairment testing is consistent with the long term sustainable growth rate for the company.

The estimated cashflow projections for the five years forecast period is N1.9Billion (2021 :N0.997Billion, this was derived by using a forecasted growth rate of 15.33% (2021 : 23%))

- The key assumptions described above may change as economic and market conditions change. The Company estimates that reasonably possible changes in these assumptions would not cause the recoverable amount of either CGU to decline below the carrying amount

Assessment of impairment on goodwill was developed by the management of the company.

a Defined Benefit Scheme

Veritas Healthcare Limited has a non-contributory defined gratuity scheme whereby on separation, staff who have spent a minimum number of periods are paid a sum based on their qualifying emoluments and the number of periods spent in service of the Company. The actuarial valuation of the scheme for 31 December 2022 was performed by PENMED Actuarial Consultants FRC/2014/NAS/0000000953.

Summary of membership data

	2023	2022
Active Members	13	13
Total annual emoluments	N114.4mn	N114.4mn
Average Liability duration over future service	18.6	18.6

Underlying assumptions

The rate used to discount Pre-retirement employment benefit obligations is determined in line with IAS19, with reference to market yields at the balance sheet date on high quality corporate bonds. In countries where there is no deep market in such bonds, the market yield on government bonds are used. The actuary is of the opinion that there is no deep market in corporate bonds in Nigeria and as such, assumptions underlying the determination of discount rates are referenced to the yield on Nigeria Government Bonds of medium duration, as compiled by the debt management office, after provision for small risk premium to be included in the discount rate assumption.

Benefit Liability and assets

	2023 N'000	2022 N'000

Unaudited Financial Statement
For the year ended 31 December 2023

	Group 31-Dec-23 N'000	Group 31-Dec-22 N'000	Company 31-Dec-23 N'000	Company 31-Dec-22 N'000
26.2 FVOCI reserve				
Balance at 1 January	(53,586)	(60,112)	(47,264)	(56,423)
Net actuarial gains on retirement benefit obligation	-	(2,633)	-	-
Fair value gain on FVOCI financial instruments	-	9,159	-	9,159
	<u>(53,586)</u>	<u>(53,586)</u>	<u>(47,264)</u>	<u>(47,264)</u>

27 Earnings per share

Basic earnings per share (kobo)

The calculation of basic earnings per share was based on the profit after tax attributable to ordinary shareholders, and a weighted average number of ordinary shares outstanding on that date calculated as follow:

	Group 31-Dec-23	Group 31-Dec-22	Company 31-Dec-23	Company 31-Dec-22
Profit after tax attributable to equity holders N'000	2,176,639	693,277	1,416,773	191,315
Weighted average no. of ordinary shares at end of year '000	6,933,333	6,933,333	6,933,333	6,933,333
Basic earnings per share (kobo)	<u>0.31</u>	<u>0.10</u>	<u>0.20</u>	<u>0.03</u>

The Company does not have any instrument with a dilutive effect on its capital, Hence, the basic earnings per share is same as diluted earnings per share

44 b Capital Management**Finance Act 2021 – Part IX – Insurance Act**

The Federal Government of Nigeria, by Federal Republic of Nigeria Official Gazette, dated 18th January, 2022, amended the Finance Act, 2021. The Finance Act 2021 (Part IX – Insurance Act) in Sections 33, 34, and 35 contains provisions which amended Sections 9, 10 and 102 of Insurance Act, 2003, as previously related to paid-up share capital. The Sections of the Act amended the Insurance Act by substituting the words “**paid-up share capital**”, with the words “**Capital requirement**” and wherever they appear in Insurance Act 2003. The words “Capital requirement” was introduced and inserted in Section 102 of the Insurance Act. By the provision of section 35, “Capital Requirement” means -

- (a) in the case of existing company -
- (i) the excess of admissible assets over liabilities, less the amount of own shares held by the
 - (ii) subordinated liabilities subject to approval by the Commission, and
 - (iii) any other financial instrument as prescribed by the Commission.

For this purpose, Admissible Assets are defined as:

Share Capital, Share Premium, Retained Earnings, Contingency Reserves, and any other admissible assets subject to the approval of the Commission;

- (a) in the case of a new company -
- (i) Government Bonds and Treasury Bills,
 - (ii) Cash and Bank balances, and
 - (iii) Cash and cash equivalent.

As an existing company, our capital requirement is as shown below:

	2023 N'000	2022 N'000
Share capital	6,933,333	6,933,333
share premium	663,600	663,600
Retained Earnings	(538,076)	(1,781,754)
Contingency reserve	1,717,947	1,434,593
Excess of admissible assets over liabilities	8,776,805	7,249,771
Less amount of own shares held (Treasury shares)	-	-
	8,776,805	7,249,771
Subordinated liabilities approved by NAICOM	-	-
Any other financial instrument approved by NAICOM	-	-
Capital Requirement	8,776,805	7,249,771

45 SEGMENT REPORTING**Identification of reportable segments**

The business activities of Veritas Kapital Plc Group are first organized by product and type of service: insurance activities, asset management activities and Health Management activities.

Information regarding the results of each reportable segment is included below. Performance is measured based on segment profit (or loss) before income taxes, as included in the internal management reports that are reviewed by the Group's CEO. Segment profit is used to measure performance as management believes that such information is the most relevant in evaluating the results of certain segments relative to other entities that operate within this industry. Inter-segment pricing is determined on an arm's length basis.

Information reported to the chief operating decision maker (the CEO) for the purposes of resource allocation and assessment of segment performance focuses on types of goods or services delivered or provided. The Company's reportable segments under IFRS 8 are therefore as follows:

- Non-life business
- Pension Administration
- Health Care

Non-Life Business

The non -life reportable segment offers a wide variety of insurance products for both personal and corporate customers. The products offer range from engineering, aviation, marine liability, motor liability, oil and energy, bond, fire and property. The main source of income in this segment is the premium received from the insured on risk covered by the entity and the investment income earned on placements and deposit with financial institutions.

Pension Administration

This reportable segment include the administration and management of the retirement benefits of members. The administration includes making investment decisions, collection of contribution and making payment to retirees in-line with provisions of Pension Reform Act 2014. The revenue earned includes administration and management fees received and receivable on members' contributions and the Net Asset value of Funds under Management respectively.

Health Care

This reportable segment is a National Health Maintenance Organization (HMO) duly licenced and accredited by the National Health Insurance Scheme which provide Health Insurance Services to individuals and organizations in both the private sector and the formal sector under the National Health Insurance Scheme (NHIS).

For the purposes of monitoring segment performance and allocating resources between segments, the Group's Chief Executive monitors the tangible, intangible and financial assets and liabilities attributable to each segment. All assets and liabilities are allocated to reportable segments.

Risk management framework**(a) Capital management objectives, policies and approach**

The Company has established the following capital management objectives, policies and approach to managing the risks that affect its capital position:

- (i) To maintain the required level of stability of the Company thereby providing a degree of security to policy holders.
- (ii) To allocate capital efficiently and support the development of business by ensuring that returns on capital employed meet the requirements of its capital providers and of its shareholders.
- (iii) To retain financial flexibility by maintaining strong liquidity and access to a range of capital markets.
- (iv) To align the profile of assets and liabilities taking account of risks inherent in the business.
- (v) To maintain financial strength to support new business growth and to satisfy the requirements of the policyholders, regulators and stakeholders.
- (vi) To maintain strong credit ratings and healthy capital ratios in order to support its business objectives and maximise shareholders value.

In reporting financial strength, capital and solvency are measured using the rules prescribed by the National Insurance Commission (NAICOM). These regulatory capital tests are based upon required levels of solvency, capital and a series of prudent assumptions in respect of the type of business written. The Company's capital management policy for its insurance and non-insurance business is to hold sufficient capital to cover the statutory requirements based on the NAICOM directives, including any additional amounts required by the regulator.

(b) Approach to capital management

The Company seeks to optimise the structure and sources of capital to ensure that it consistently maximises returns to shareholders and policyholders. The Company's approach to managing capital involves managing assets, liabilities and risks in a coordinated way, assessing shortfalls between reported and required capital levels on a regular basis and taking appropriate actions to influence the capital position of the Group in the light of changes in economic conditions and risk characteristics.

The primary source of capital used by the Company is equity shareholders' funds.

The Group has had no significant changes in its policies and processes to its capital structure during the past quarter from previous quarters.

The table below shows the available capital resources as at 31 December:

	2023	2022
Total shareholders' funds	11,063,008	9,535,976
Regulatory required capital	3,000,000	3,000,000
Excess capital reserve	8,063,008	6,535,976

(c) Regulatory framework

The insurance industry regulator measures the financial strength of Non-Life Insurers using a Solvency Margin model. NAICOM generally expects non-life insurers to comply with this capital adequacy requirement. Section 24 of the Insurance Act 2003 defines the solvency margin of a non-life insurer as the difference between the admissible assets and liabilities, and this shall not be less than 15% of the net premium income (gross income less reinsurance premium paid), or the minimum capital base (3 billion) whichever is higher.

47 Solvency Margin

The solvency margin for the company as at 31December is as follows:

			31-Dec-23	31-Dec-22

		-	-	-	1,415,528	1,415,528				

The Company has disclosed the fair value of each class of financial assets and liabilities in a way that permits the information to be compared with the carrying amounts. In addition, it has reconciled the assets and liabilities to the different categories of financial instruments as defined in IFRS 9 Financial instruments: Recognition and Measurement.

* The Company has not disclosed the fair values for financial instruments such as receivables, payables and reinsurance assets because their carrying amounts are a reasonable approximation of fair value.

^ Reinsurance assets excludes prepaid reinsurance, which is not a financial asset (#593.3 million)

^^ Unquoted equities not measured at fair value comprise of unquoted equities carried at cost as their fair value was not readily available.

Financial risk management

The Company has exposure to the following risks arising from financial instruments

Credit risk
Liquidity risk
Market risk

(b)(i) Risk management framework

The company has an Enterprise -wide Risk Management (ERM) Frame work that is responsible for identifying and managing the inherent and residual risks facing the Company. The Company's board of directors has the overall responsibility for the establishment of oversight of the Company's risk management framework. The board of directors has established the Risk Management Committee, which is responsible for developing and monitoring the Company's risk management policies. The committee reports regularly to the board of directors on its activities.

The Company's risk management policies are established to identify and analyse the risk faced by the Company, to set appropriate risk limits and controls, and to monitor risks and adherence to limits. Risk management policies and systems are reviewed regularly to reflect changes in market conditions and Company activities. The Company, through its training and management standards and procedures, aims to maintain a disciplined and constructive control environment in which all employees understand their roles and obligations.

The Company audit committee oversees how management monitors compliance with the Company's risk management policies and procedures and reviews the adequacy of the risk management framework in relation to the risks faced by the Company. The Company Audit Committee is assisted in its oversight role by Internal Audit. Internal Audit undertakes both regular and ad hoc reviews of risk management controls and procedures, the result of which are reported to the audit committee.

(b)(ii) Credit risk

Credit risk is the risk of financial loss to the Company if a customer or counterparty to a financial instrument fails to meet its contractual obligations, and arises principally from the Company's receivables from customers and investment in debt securities.

The carrying amount of financial assets represents the maximum credit exposure.

In addition to credit risks arising out of investments and transactions with clients, Veritas Kapital Assurance actively assumes Credit Risk through the writing of insurance business. Credit Risk can arise when a client defaults on settlement of premium payments and can also arise when its own repayment capability decreases (as reflected in a rating downgrade).

Veritas Kapital Assurance's strategy as Insurance Company does not entail the elimination of Credit Risk but rather to take on Credit Risk in a well-controlled, planned and targeted manner pursuant to its business objectives. Its approach to measuring Credit Risk is therefore designed to ensure that it is assessed accurately in all its forms, and that relevant, timely and accurate Credit Risk information is available to the relevant decision makers at an operational and strategic level at all times.

At a strategic level, Veritas Kapital Assurance manages its credit risk profile within the constraints of its overall Risk Appetite and structured its portfolio so that it provides optimal returns for the level of risk taken. Operationally, the Insurance Company Credit Risk Management is governed by the overall risk appetite framework and aims to ensure that the risk inherent to individual exposures or certain business portfolios are appropriately managed through the economic cycle.

The organization is committed to:

- a) Create, monitor and manage credit risk in a manner that complies with all applicable laws and regulations.
- b) Identify Credit Risk in each investment, loan or other activity of the Insurance Company.
- c) Utilize appropriate, accurate and timely tools to measure credit risk.
- d) Set acceptable risk parameters.
- e) Maintain acceptable levels of credit risk for existing individual credit exposures.
- f) Maintain acceptable levels of overall credit risk for Veritas Kapital Assurance's Portfolio; and
- g) Coordinate Credit Risk Management with the

Unaudited Financial Statement
For the year ended 31 December 2023

Unsecured exposures to high risk obligors, transactions with speculative cash flows, loans in which the insurance Company will hold an inferior or subordinate position are some of the credit exposures that are considered undesirable by the organization.

The Company's credit risk can be analysed as follows:

	2023	2022
	N'000	N'000
Reinsurance receivables (see note (a) below)	1,759,282	899,984
Cash and cash equivalents (see note (b) below)	6,465,317	4,408,793
Debt Instruments (see note (c) below)	7,623,167	5,169,710
Statutory deposit	355,000	355,000
	16,202,766	10,833,487

a Reinsurance receivables

The Company insures its liabilities with reputable reinsurance companies with which it has a right of set-off. None of its receivables from reinsurance companies was impaired as at 31 December 2023 (2022: NIL)

b Cash and cash equivalents

The Company's cash and cash equivalents are held with reputable banks and financial institutions.

c Armotized cost

The Company's Debt instruments are investment in bonds with Government and reputable financial institutions. None of its investment was impaired as at 31 December 2023 (2022: Nil)

The Company did not have any debt securities that were past due but not impaired as at 31 December 2022 (2021:

Veritas Kapital Assurance Plc is exposed to risk relating to its investment securities (Fixed deposits and receivables). Its receivables comprise trade receivables from customers, reinsurers and coinsurers recoverable and other receivables.

Collateral held and other credit enhancements, and their financial effect

The Company does not hold collateral or any other enhancements against any of its receivables as at 31 December 2023.

Trade receivables

The Company has placed more responsiveness on effective management of credit risk exposure that relates to trade receivables. In general, the regulator has laid great emphasis on "No Premium, No Cover" and this has positively changed the phase of credit management within the industry. The Company defines credit risk as the risk of counterparty's failure to meet its contractual obligations. Credit risk arises from insurance cover granted to parties with payment instruments or payments plan issued by stating or implying the terms of contractual agreement.

The Company has placed stringent measures to guard against credit default. Credit risk exposure operates from the level of brokered transactions with little emphasis placed on direct business. The Company's credit risk exposure to brokered business is very low as the Company requires brokers to provide payment within 30 days after which impairment trigger is identified and the receivable is assessed for impairment.

Sources of credit risk:

- Direct default risk: risk that the Company will not receive the cash flows or assets to which it is entitled because a party with which the Company has a bilateral contract defaults on one or more obligations.
- Downgrade Risk: risk that changes in the possibility of a future default by an obligor will adversely affect the present value of the contract with the obligor today.
- Settlement Risk: risk arising from the lag between the value and settlement dates of securities transactions.

Management of credit risk due to trade receivables

The Company constantly reviews brokers' contribution to ensure that adequate attention is paid to high premium contributing brokers.

The Company credit risk is constantly reviewed and approved during the Management Committee meetings. It also ensured that adequate provisions are taken in line with IFRS 9. Other credit risk management includes:

- Formulating credit policies with strategic business units, underwriters, brokers, covering brokers grading, reporting, assessment, legal procedures and compliance with regulatory and statutory bodies.
- Identification of credit risk drivers within the Company in order to coordinate and monitor the probability of default that could have an unfortunate impact.
- Developing and monitoring credit limits. The Company is responsible for setting credit limits through grading in order to categorize risk exposures according to the degree of financial loss and the level of priority expected from management.
- Assessment of credit risk. All first-hand assessment and review of credit exposures in excess of credit limits, prior to granting insurance cover are subject to review process and approval given during MC meetings.
- Continuous reviewing of compliance and processes in order to maintain credit risk exposure within acceptable parameters.

Impairment model

Premium debtors are measured at amortized cost, less provision for impaired receivables. Under IFRS, an asset is impaired if the carrying amount is greater than the recoverable amount. The standard favours the use of the incurred loss model in estimating the impairment of its receivables. However, with the inception of IFRS 9 which becomes effective for annual periods beginning on/after 1 January 2018, the Expected Credit Losses (ECL) method of impairment calculation will be in force.

The Company uses the aging of receivables as the major parameter in calculating impairment. However, based on NAICOM's "No Premium No Cover" guidelines which state that "all insurance covers shall be provided on a strict 'no premium no cover' basis", only cover for which payment has been received shall be booked. However, brokers have a 30 day period to make payments from the date of the credit notes. The Company uses the aging of receivables as the major parameter in calculating impairment.

The impairment requirements of IFRS 9 apply to all debt instruments that are measured at amortised cost or FVOCI, and to off-balance sheet lending commitments such as loan commitments and financial guarantees (hereafter collectively referred to as financial assets). This contrast to the IAS 39 impairment model which was not applicable to loan commitments and financial guarantee contracts, as there were instead covered by International Accounting standards 37: "Provisions, contingent liabilities and contingent assets (IAS 37).

The determination of impairment loss and allowance moves from the incurred credit loss model whereby credit losses are recognized when a defined loss event occurs under IAS 39, to expected credit loss model under IFRS 9, where provisions are recognised upon initial recognition of the financial asset based on expectation of potential credit losses at the time of initial recognition. Under IFRS 9, The Company first evaluates individually whether objective evidence of impairment exists for loans that are individually significant and then collectively assess the loan and other receivables that are not significant and those which are significant but for which there is no objective evidence of impairment available under the individual assessment

Staged Approach to the Determination of Expected Credit Losses

IFRS 9 outlines a three-stage model for impairment based on changes in credit quality since initial recognition. These stages are as outlined below:

Stage 1: The Company recognises a credit loss allowance at an amount equal to the 12 month expected credit losses. This represents the portion of lifetime expected credit losses from default events that are expected within 12 months of the reporting date, assuming that credit risk has not increased significantly after the initial recognition.

Stage 2: The Company recognises a credit loss allowance at an amount equal to the lifetime expected credit losses (LTECL) for those financial assets that are considered to have experienced a significant increase in credit risk since initial recognition. This requires the computation of ECL based on Lifetime probabilities of default that represents the probability of a default occurring over the remaining lifetime of the financial assets. Allowance for credit losses is higher in this stage because of an increase in credit risk and the impact of a longer time horizon being considered compared to 12 months in stage 1.

Stage 3: The Company recognises a loss allowance at an amount equal to life-time expected credit losses, reflecting a probability of default (PD) of 100% via the recoverable cash flows for the asset. For those financial assets that are credit impaired. The Company's definition of default is aligned with the regulatory definition. The treatment of the loans and other receivables in stage 3 remains substantially the same as the treatment of impaired financial assets under IAS 39 except for the portfolios of assets purchased or originated as credit impaired

The Company does not originate or purchase credit impaired loans or receivables

Impairment Methodology

Calculation of Expected Credit Losses

Calculation of the expected credit loss is based on the key risk parameters of PD, LGD and ED according to the formula set below:

ECL	=	PD	X	EAD	X	LGD
12 -month / lifetime Expected Credit Loss (ECL)		Probability of default		Exposure at default		Loss Given Default (after consideration of collaterals and recoveries)

The calculation of ECL incorporates forward-looking information in all the ECL components. This forward-looking information will impact the various ECL components as follows:

Probability of default – The PDs will vary during various stages of an economic cycle. It is based on the likelihood that a borrower will default within one year (PD), assessment of the creditworthiness of the counterparty and transformation of 1 Year horizon into lifetime of the asset.

Loss Given Default – Collateral values will vary based on the stage of an economic cycle.

Exposure at default – Change in interest rates may affect the EAD e.g. higher interest rates may result in longer terms for loans causing a change in the EAD.

Loss Given Default

The Company applies historical experience to determine the expected loss given default ratios for each class of financial instruments. Where internal historical experience is not available, other sources, e.g. data available from rating companies as well as professional judgments are used to determine the LGD ratios that will apply. Collateral that is held against the financial assets is also considered in determining the LGD.

The Company management has resolved to use the recovery rates as published by Moodys credit analytics for all credit exposures to sovereign denominated in foreign currencies and all corporate exposures.

For sovereign exposures denominated in Naira which are assessed as low credit risk exposures, we have resolved to use LGDs within the range of 5-10% based on the Central banks of Nigeria's Revised Guidance Notes on Credit risk. Section 3.1 of the document addresses exposure to sovereigns and Central banks and states that financial institutions should assign a risk weight of 0% to the following:

- Exposures to Federal Government of Nigeria (FGN) and Central Bank of Nigeria (CBN);
- Instruments issued by other entities backed by express guarantee of the FGN;
- Inter-bank transactions guaranteed by the FGN or CBN; and
- Inter-bank transactions among supervised institutions collateralized by FGN Bonds, Treasury Bills or other similar sovereign bills.

Treatment of loans and other receivables

All loans issued fall within the scope of debt instruments as financial assets. This covers e.g. Inter-company loans, staff loans and mortgages etc.

Estimation of impairment on the loans based on expected loss is done in the three-stage approach with specific consideration for change in credit risk and forward-looking assumptions.

Intercompany loans are considered low credit risk if it meets the required conditions. Estimation and provision for impairment is based on simplified one stage approach. Loans are put in one bucket e.g. stage 1 and assess the 12 month ECL as long as there are no assets for assessed to have had significant increase in credit risk or the initial criteria for categorizing the asset as low risk has changed.

Significant increase in credit risk, default and cure

The Company continuously monitors all assets subject to ECLs. In order to determine whether an instrument or a portfolio of instruments is subject to 12mECL or LTECL, the Company assesses whether there has been a significant increase in credit risk since initial recognition. The Company considers that there has been a significant increase in credit risk when any contractual payments are more than 30 days past due. In addition, the Company also considers a variety of instances that may indicate unlikelihood to pay by assessing whether there has been a significant increase in credit risk. Such events include:

- Internal rating of the counterparty indicating default or near-default
- The counterparty having past due liabilities to public creditors or employees
- The counterparty (or any legal entity within the debtor's group) filing for bankruptcy application/protection
- Counterparty's listed debt or equity suspended at the primary exchange because of rumours or facts about financial difficulties.

The Company considers a financial instrument defaulted and, therefore, credit-impaired for ECL calculations in all cases when the counterparty becomes 90 days past due on its contractual payments. The Company may also consider an instrument to be in default when internal or external information indicates that the Company is unlikely to receive the outstanding contractual amounts in full. In such cases, the Company recognises a lifetime ECL. In rare cases when an instrument identified as defaulted, it is the Company's policy to consider a financial instrument as 'cured' and therefore re-classified out of credit-impaired when none of the default criteria have been present for at least 12 months.

There has been no significant increase in credit risk or default for financial assets during the year.

Expected credit loss

The Company assesses the possible default events within 12 months for the calculation of the 12mECL. Given the investment policy, the probability of default for new instruments acquired is generally determined to be minimal and the expected loss given default ratio assumed to be 100%. In rare cases where a lifetime ECL is required to be calculated, the probability of default is estimated based on economic scenarios.

Impairment losses on financial investments subject to impairment assessment

Debt instruments measured at amortised cost

The table below shows the credit quality and the maximum exposure to credit risk per based on the Company's internal/Moody's credit rating system and year-end stage classification. The amounts presented are gross of impairment allowances. Details of the Company's internal grading system are also provided.

Unaudited Financial Statement

As at 31 December 2023, the Group had no asset reposed as security against asset. The group policy is to pursue timely realisation of collateral in an orderly manner in the case of default. The company does not generally use the non cash collateral for its own operations.

As at 31 December 2023, the Company has not pledged any of its assets as collateral for any liability or payable balance (2021: nil)

Amounts arising from ECL

Inputs, assumptions and techniques used for estimating impairment.

When determining whether the credit risk (i.e. Risk of default) on a financial instrument has increased significantly since initial recognition, the Company considers reasonable and supportable information that is relevant and available without undue cost of effort. This includes both qualitative and quantitative information analysis based on the Company's experience, expert credit assessment and forward looking information. The Company primarily identifies whether a significant increase in credit risk has occurred for an exposure by comparing the remaining life time probability of default (PD) as at reporting date with the remaining Life time PD for this point in time that was estimated on initial recognition of the exposure.

Whenever available, the Company monitors changes in credit risk by tracking published external credit ratings. To determine whether published ratings remain p to date and to assess whether there has been a significant increase in credit risk at the reporting date that has not been reflected in the published rating, the group also reviews changes in Bond yields together with available press and regulatory information about issuers.

Where external credit ratings are not available, the Company allocates each exposure to a credit risk grade based on data that is determined to be predictive of the risk of default (including but not limited to the audited financial statement, management accounts and cashflow projections, available regulatory and press information about the borrowers and apply experienced credit judgement. Credit risk grades are defined by using qualitative and quantitative factors that are indicative of the risk of default and are aligned with the external credit rating definition from Moody's and standards and Poor.

Unaudited Financial Statement
For the year ended 31 December 2023

The Company has assumed that the credit risk of a financial asset has not increased significantly since the initial recognition if the financial asset has low credit risk at reporting date. The company considers a financial asset to have low credit risk when its credit risk rating is equivalent to the globally understood definition of "investment grade". The Company considers this to be B- or higher based on the Moody rating which is equivalent to an internal risk grade of standard grade or higher.

As a back stop, the Company considers that a significant increase in credit risk occurs no later than when the asset is more than 30 days past due. Days past due are determined by counting the numbers of days since the earliest elapsed due date in respect of which full payments has not been received. Due dates are determined without considering any grace period that might be available to the borrower. The Company monitors the effectiveness of the criteria used to identify significant increase in credit risk by regular reviews to confirm that:

- The criteria are capable of identifying significant increase in credit risk before an exposure is in default;
- The criteria do not align with the point in time when the asset becomes 30 days past due;
- The average time between the identification of a significant increase in credit risk and default appears reasonable
- Exposures are not generally transferred from 12- month ECL measurement to credit impaired and
- There is no unwarranted volatility in loss allowance from transfers between 12-month ECL and Lifetime ECL measurement.

Definition of default

The Company considers a financial asset to be in default when the borrower is unlikely to pay its credit obligations to the company in full, without recourse by the company to actions such as realizing security (if any is held); or the financial asset is more than 90 days past due.

In assessing whether a borrower is in default, the Company considers indicators that are:

- qualitative: e.g. breaches of covenant and the other indicators of financial distress;
- quantitative: e.g. overdue status and non-payment of another obligation of the same issuer to the company; and
- based on data developed internally and obtained from external sources.

Inputs into the assessment of whether a financial instrument is in default and their significance may vary over time to reflect changes in circumstances.

Incorporation of Forward looking information

The Company incorporates forward-looking information into both its assessment of whether the credit risk of an instrument has increased significantly since initial recognition and its measurement of ECL. It formulates a 'base case' view of the future direction of relevant economic variables and a representative range of other possible forecast scenarios based on advice from the Company's Investment and risk committee, economic experts and consideration of a variety of external actual and forecast information. This process involves developing three additional economic scenarios and considering the relative probabilities of each outcome. External information includes economic data and forecasts published by governmental bodies and monetary authorities in the Nigeria, supranational organizations such as the Organisation for Economic Cooperation and Development and the International Monetary Fund, and selected private-sector and academic forecasters.

The base case represents a best estimate and is aligned with information used by the Company for other purposes such as strategic planning and budgeting. The other scenarios represent more optimistic and pessimistic outcomes."

Measurement of ECL

The calculation of the expected credit loss is based on the key risk parameters of Probability of default (PD), Loss given default (LGD) and Exposure at default (EAD)

To determine the Lifetime and 12-month PDs, the Company uses the PD tables supplied by Moody's based on the default history of sovereign and corporate obligors with the same credit rating. The Company adopts the same approach for unrated investments by mapping its internal risk grades to the equivalent external credit ratings. The PDs are recalibrated and adjusted to reflect forward looking information as described below. Changes in the rating for counterparties and exposure lead to a change in estimate of the associated PD.

Loss Given Default is the magnitude of the likely loss if there is a default. The Company estimates LGD parameters based on the history of recovery rates of claims against the defaulted counterparties. The LGD for sovereign fixed income exposures are based on publications by Moody's and the models consider the structure, collateral, seniority of claims and recovery of any collateral that is integral to the financial asset. For loans secured with properties or asset, loan to value ratios are key parameter in determining LGD. LGDs are calculated on discounted cash flow basis using effective interest rate as the discounting factor.

EAD represents the expected exposure in the event of a default. The Company deprives the EAD from the current exposure to the counterparty and potential changes to the current amount allowed under the contract, including amortisation, and prepayments. The EAD of a financial asset is its gross carrying amount. As described in the accounting policy, and subject to using a maximum of a 12-month PD for financial assets for which credit risk has not significantly increased, the Company measures ECL considering the risk of default over the maximum contractual period (including any borrower's extension options over which it is exposed to credit risk, even if, for risk management purposes, the Company considers a longer period). The modelling of parameter is carried out on an individual basis or collective basis where the assets share same risk characteristics like instrument type, credit risk rating and grading, collateral type, date of initial recognition or remaining term to maturity or industry. The groupings are subject to regular review to ensure that exposures within a particular group remain appropriately homogeneous.

When ECL are measured using parameters based on collective modelling, a significant input into the measurement of ECL is the external benchmark information that the Company uses to derive the default rates of its portfolios. This includes the PDs provided in the Moody's or Standards and Poor default study and the LGDs provided in the recovery studies reports provided by the same rating agencies.

An overview of the approach to estimating ECLs is set out in Note 2.1 Summary of significant accounting policies and in Note 2.3 Significant accounting judgements, estimates and assumptions. To ensure completeness and accuracy, the Company obtains the data used from third party sources (Moody's, Standards and Poor, Economist associate etc.) and its investment team verifies the accuracy of inputs to the Company's ECL models including determining the weights attributable to the multiple scenarios.

(c) Liquidity risk

Liquidity risk is the risk that the Company will encounter difficulty in meeting the obligations associated with its financial liabilities that are settled by delivering cash or another financial asset.

The Company's approach to managing liquidity is to ensure, as far as possible, that it will have sufficient liquidity to meet its liabilities when they are due, under both normal and stressed conditions, without incurring unacceptable losses or risking damage to the Company's reputation.

The Company uses activity-based costing to cost its products and services, which assists it in monitoring cash flow requirements and optimising its cash return on investments.

The Company aims to maintain the level of its cash and cash equivalents at an amount in excess of expected cash outflows on financial liabilities over the next 60 days.

The Company also monitors the level of expected cash inflows on trade and other receivables together with expected cash outflows on trade and other payables.

Exposure to liquidity risk

The following are the remaining contractual maturities of financial liabilities at the reporting date.

The amounts are gross and undiscounted, include contractual interest payments and exclude the impact of netting agreements.

Market risk

Market risk is the risk that changes in market prices - such as foreign exchange rates, interest rates and equity prices - will affect the Company's income or the value of its holdings of financial instruments. The objective of market risk management is to manage and control market risk exposures within acceptable parameters, while optimising the returns.

Currency risk

The Company is exposed to currency risk to the extent that there is a mismatch between the currencies in which premium and claims are denominated and the respective functional currencies of the Company. The functional currency of the Company is the Nigerian naira.

The currencies in which these transactions are primarily denominated are the Nigerian naira.

However, the Company receives some premium in foreign currencies and also pays some claims in foreign currencies. The foreign currencies the Company transacts in include euro, british pounds and united states dollars.

Exposure to currency risk

The summary quantitative data about the Company's exposure to currency risk as reported to the management of the Company is as follows:

In Thousands of	31 December 2023			31 December 2022		
	Carrying	USD	NGN	Carrying value	USD	NGN
Cash and cash equivalent	4,601,255	1,571,815	3,029,440	2,337,933	1,571,815	766,118
Financial assets	3,397,940	857,279	2,540,661	1,641,740	857,279	784,461
Net statements of financial position exposure	7,999,195	2,429,094	5,570,101	3,979,673	2,429,094	1,550,578

The following significant exchange rates have been applied.

Naira	Period- end spot rate	
	2023	2022
USD 1	907.11	448.55

Sensitivity analysis

A reasonably possible strengthening (weakening) of the US dollar against all other currencies at 31 December would have affected the measurement of financial instruments denominated in a foreign currency and affected equity and profit or loss by the amounts show below. This analysis assumes that all other variables, in particular interest rates, remain constant and ignores any impact of forecast sales and purchases.

Effects in thousand of naira	Profit or Loss		Equity, net of tax	
	Strengthening	Weakening	Strengthening	Weakening
31 December 2023				
USD (10% movement)	242,909	(242,909)	242,909	(242,909)
31 December 2022				
USD (10% movement)	242,909	(242,909)	242,909	(242,909)

(c)(v) Interest rate risk

The Company adopts a policy of ensuring that all its interest rate risk exposure is at a fixed rate. This eliminates the variability in the risks and returns on the Company's interest bearing assets and liabilities.

Exposure to interest rate risk

The interest rate profile of the Company's interest-bearing financial instruments as reported to the management of the Company is as follows.

The Company purchases reinsurance as part of its risks mitigation programme. Reinsurance ceded is placed on both a proportional and non-proportional basis. The majority of proportional reinsurance is quota-share reinsurance which is taken out to reduce the overall exposure of the Company to certain classes of business. Non-proportional reinsurance is primarily excess-of-loss reinsurance designed to mitigate the Company's net exposure to catastrophe losses. Retention limits for the excess-of-loss reinsurance vary by product line and territory.

Amounts recoverable from reinsurers are estimated in a manner consistent with the outstanding claims provision and are in accordance with the reinsurance contracts. Although the Company has reinsurance arrangements, it is not relieved of its direct obligations to its policyholders and thus a credit exposure exists with respect to ceded reinsurance, to the extent that any reinsurer is unable to meet its obligations assumed under such reinsurance agreements. The Company's placement of reinsurance is diversified such that it is neither dependent on a single reinsurer nor are the operations of the Company substantially dependent upon any single reinsurance contract.

The Company principally issues the following types of general insurance contracts: fire, motor, bond, personal accident, aviation, marine and oil and gas. Risks under non-life insurance policies usually cover twelve months duration. For general insurance contracts, the most significant risks arise from climate changes, natural disasters and terrorist activities. For longer tail claims that take some years to settle, there is also inflation risk. The above risk exposure is mitigated by diversification across a large portfolio of insurance contracts and geographical areas. The variability of risks is improved by careful selection and implementation of underwriting strategies, which are designed to ensure that risks are diversified in terms of type of risk and level of insured benefits. This is largely achieved through diversification across industry sectors and geography.

Furthermore, strict claim review policies and procedures exist to assess all new and on-going claims, regular detailed review of claims handling procedure and frequent investigation of possible fraudulent claims are all policies and procedures put in place to reduce the risk exposure of the Company. The Company further enforces a policy of actively managing and promptly pursuing claims, in order to reduce its exposure to unpredictable future developments that can negatively impact the business. Inflation risk is mitigated by taking expected inflation into account when estimating insurance contract liabilities.

The Company has also limited its exposure by imposing maximum claim amounts on certain contracts as well as the use of reinsurance arrangements in order to limit exposure to catastrophic events (e.g., hurricanes, earthquakes and

The purpose of these underwriting and reinsurance strategies is to limit exposure to catastrophes based on the Company's risk appetite as decided by management. The overall aim is currently to restrict the impact of a single catastrophic event to approximately 50% of shareholders' equity on a gross basis and 10% on a net basis. In the event of such a catastrophe, counterparty exposure to a single reinsurer is estimated not to exceed 2% of shareholders' equity. The Board may decide to increase or decrease the maximum tolerances based on market conditions and other factors.

Key assumptions

The principal assumption underlying the liability estimates is that the Company's future claims development will follow a similar pattern to past claims development experience. This includes assumptions in respect of average claim costs, claim handling costs, claim inflation factors and claim numbers for each accident year.

We have adopted actuarial methods and assumptions that are consistent with those used in prior years. The level of reserve was determined after data cleansing by using our internationally accepted actuarial models

The calculation of the reserves was conducted on both deterministic (assuming average historic experience would be reflected in the future experience without attaching probability or level of uncertainty of variations around such experience) and stochastic (allowing for likely future variation around the average expected experience) and stochastic approach uses Bootstrap-Mark method

Chain Ladder Method (CL)

We have used the Chain Ladder method which is the most widely used method in loss reserving, and it is the starting point of the other reserving methods described in this report. The Chain Ladder also called Loss development triangle method uses statistical projection technique that relies on the setting of past known claim payments by year of origin (accident year) and year of payment (development year). Using historical claims paid for each class, we grouped the claims into 10 years cohorts, considering the age-age-claim amounts paid. These cohorts are called loss development triangles. Each left - right diagonal represents the total loss amounts paid in that year for losses reported in each accident year. The age-to-age claim amounts are then accumulated from the origin year to the valuation date. The cumulated incremental paid claims (2008-2017) to the valuation date are then projected to their expected ultimate claim estimate, using factors called link ratios or development factors. The gross claim reserves are then derived from the difference between the cumulated actual paid claims and the estimated ultimate claim. Variants of the chain ladder method were exploited to reflect adequately the key characteristics of the risks being reserved for by the company.

The IACL is a variant of the chain ladder method and it could be used with allowance for time value of money (discounting or no discounting). Under this method, the historical age -to- age paid claims are increased in line with relevant inflation index from their accident year of or payment to the valuation year before being cumulated. The cumulated payments in money terms of the valuation year are projected into the future. The decumulated payments are then projected forward to their expected year of payment and ultimate claim estimate, allowing for future inflation. Published year - to - year inflation factors used in our projection is as stated in the assumptions section of this report. We have calculated for two types of this

Expected Loss Ratio Method

We estimated the ultimate loss ratio from historical data for each class of business and multiplied this by the earned premium for that class in each accident year to obtain the ultimate claim for each accident year. In arriving at the historical loss ratio, we considered the underwriter's views. We then deducted the actual paid claim amount to date to give the required outstanding claim reserve. This approach is considered appropriate for as it is not affected by distortions in data and although it is simplistic but gives an approximate estimate. We applied this method for classes where there is no sufficient mass of data to generate credible results using other more sophisticated methods.

Claims development table

The following tables show the estimates of cumulative incurred claims, including both claims notified and IBNR for each successive accident year at each reporting date, together with cumulative payments to date. The estimated technical reserves are derived statically through analysing the company's non-life policy data for policies underwritten and emerging claims over each of the past 6 (six) underwriting years.

In general, the uncertainty associated with the ultimate claims experience in an accident year is greatest when the accident year is at an early stage of development and the margin necessary to provide the necessary confidence in the provisions adequacy is relatively at its highest. As claims develop, and the ultimate cost of claims becomes more certain, the relative level of margin maintained should decrease. However, due to the uncertainty inherited in the estimation process, the actual overall claim provision may not always be in surplus.

In Thousands of naira	31-Dec-23	31-Dec-22
Fixed-rate instruments		
Cash deposit	547,249	430,018
Money market placement	5,923,765	3,984,471

	13,960,697	9,606,623

Cashflow sensitivity analysis for fixed-rate instruments

	Profit or 100bp increase	loss 100bp decrease	Equity, 100bp increase	net of tax 100bp decrease
Effect in thousands of naira				
31 December 2023				
Financial instruments	1,396,070	(1,396,070)	890,507	(890,507)
	1,396,070	(1,396,070)	890,507	(890,507)
31 December 2022				
Financial instruments	960,662	(960,662)	890,507	(890,507)
	960,662	(960,662)	890,507	(890,507)

The analysis assumes that all other variables, in particular, foreign currency exchange rates remain constant.

Fair value sensitivity analysis for fixed-rate instruments

The Company does not account for any fixed-rate financial assets and financial liabilities at fair value through profit or loss. Therefore, a change in interest rates at the reporting date would not affect profit or loss.

Other market price risk

The Company is exposed to equity price risk, which arises from available-for-sale equity securities held for partially meeting the claims and benefits obligations.

The management of the Company monitors the proportion of equity securities in its investment portfolio based on market indices.

Material investments within the portfolio are managed on an individual basis and all buy and sell decisions are approved by

The primary goal of the Company's investment strategy is to maximise investment returns, both to partially meet the Company's claims and benefits obligations and to improve its returns in general.

Sensitivity analysis - Equity price risk

The Company's has equity investments some of which are listed on the Nigeria Stock Exchange and are classified as fair value through profit or loss. A 2% increase in the share price of those equities at the reporting date would have increased equity by N1 .36 million after tax (2022: N1.36 million). An equal change in the opposite direction would have reduced equity by N1.36 million after tax (2022: N1.36 million).
